

NEWS of the RACK VCV

key events • new modules • developer news • module videos • contests • and more

Hello, everyone in Rack-Land,

20 new modules have been added since the last issue. I almost couldn't believe it myself and counted it several times, it's true. Awesome! That's 1221 modules according to my module browser. And all within a year. I don't even know what to say. And now for the news.

Developer News

AS Modules has reworked some modules and is now at version **0.6.12**.
<https://github.com/AscustomWorks/AS>

Impromptu Modular has revised the Advanced Gate mode of its sequencers in version **0.6.12**. The assignment of the gates has thus become easier.

<https://github.com/MarcBoule/ImpromptuModular>

JW Modules has optimized its polyphonic sequencer **NoteSeq** with version **0.6.3**.
<https://github.com/jeremywen/JW-Modules>

TriggerFish Elements has revised its VCA in version **0.6.4**.
<https://github.com/JtriggerFish/TriggerFish-VCV>

Vult has released version **0.6.16** of its premium modules. The analog distortion module **Flame** now has additional modes for distortion.
<https://modlfo.github.io/VultModules>

New modules

Also this week we welcome a new module developer in the Plugin Manager.

Holonic Systems offers a controller that allows you to control virtual or hardware instruments with your whole body via Midi or OSC. So that this is also possible with VCV rack, there is the free **Holon.ist Receiver**.
<https://github.com/hdavid/VCVRack-Holon.ist>

cf has released two new modules with version **0.6.7**. **Algebra** is a mathematical module which mathematically links 2 input signals and outputs the result. **Variable** generates volts and is also a sample&hold.

<https://github.com/cfoulc/cf/releases>

Computerscare has released with version **0.6.4** the Laundry Soup module, a trigger sequencer that processes text and mathematical formulas as input.

<https://github.com/freddyz/computerscare-vcv-modules>

Omri Cohen's Modular Fungi collection is entering its second round. The new blank motifs are called **Zen**, are black and white and can be selected via the

context menu.

<https://github.com/david-c14/ModularFungi>

2 weeks ago there were no new modules from **Nysthi**, but last week there was the concentrated load. 11 new modules have been added with the versions **0.6.28** - **0.6.30**. **Seven Seas** is a wavetable oscillator, **Bridges** is a dual controllable gate, **Bivio** is a triple gate, **Janneker** is a pulse sequencer, **Janneker Timed** is the same module with real-time, **Magister Fuzz** is an emulation of the diode version of the Maestro MFZ-1 Fuzz, **Rodent V2** is an emulation of the ProCo Rat Stomp Box, **Smashmaster** is an emulation of the Marshall Shred Master Stomp Box, **Monorecorder** is a mono version of the Master Recorder, **RXG100ChanA** is an emulation of the Randall RG100 Preamps Channel A and **RXG100ChanB** of Channel B.

<https://github.com/nysthi/nysthi/releases>

Squinky Labs has also released three new modules with version **0.6.8**. **EV3** is a triple oscillator with Even Waveform, as in principle 3 Even VCO, **Gray Code** is a clock divider according to the scheme of Gray Code, **Shaper** is a Wave Shaper with 8 different modes. And as always at Squinky Labs, the modules are very economical to use and have hardly any aliasing.

<https://github.com/squinkylabs/SquinkyVCV>

Also from **Vult** there are 2 new modules which are included in Premium as well as Free **0.6.16**. **Basal** is an oscillator for soft and soft sounds, **Bleak** is the oscillator from Incubus and corresponds to a single oscillator from Vessek.

<https://modlfo.github.io/VultModules/>

Competitions

In **week 17** of the **Very Cool Patch Contest** only **noise modules** were allowed to be used as sound generators and as always only freely available modules. Contributions could still be submitted until **Monday at midnight** and a new contest with another module starts on **Tuesday**. In the **16th week** the module was the **Random Sampler** from **Audible Instruments** and the winner was once again **Omri Cohen**. Congratulations to the winner and many thanks to all participants and all good luck for the next time.

VCV Rack - Día de los Muertos Vult Giveaway Contest

Leonardo Laguna Ruiz, the developer of the **Vult** modules, and Omri Cohen are hosting another **giveaway contest** on the occasion of the upcoming **Día de los Muertos**, the Day of the Dead. Although it's actually **two contests**. **If you don't own the commercial modules from Vult yet**, you can win both packages - Premium & Compacts. The patch to be created may only

contain the free modules from Vult, as well as the Core Audio module and a reverb (no delay and no midi). If you want, you can also use additional modules of JW Modules.

For owners of the commercial modules, the price is the integration of their name or logo into Vult's 3 HP Blank module, so that it can be displayed in the scope - just like the Vult logo already is. In this case, all Vult modules may be used, but otherwise the conditions are the same.

The theme of the patch is supposed to be creepy and unsettling **and the video has to be uploaded to Youtube by 31. 10. 2018 and a link to this video has to be sent to:**

vultgiveaway@gmail.com

Afterwards there will be a vote in the official VCV Rack Facebook Group until 2. 11. 2018. More information at https://youtu.be/Ndgluk_yqb4

Videos

ablaut:

*Every Sunday a new live stream called **Cable Madness**. (13:00 UTC, 15:00 Central European, 21:00 Shanghai, 9:00 New York)*
