

NEWS of the RACK VCV

key events • new modules • developer news • module videos • contests • and more

#2 - Week 27/2019

Hello everyone in Rack Land,

last week I added more than 200 modules and my current status is 1215. Not all are of course new, many were only converted to V1, but this number is already gigantic. Not all of these modules are already downloadable via the Plugin Manager, many are self-compiled beta versions. As always you will find a list of all currently known modules and download links. If you know any other modules, I would like to add them to the list, just write them in the comments and they will be included in the next update.

Even if you have information that you would like to share with the community, you can send me a PM. Editorial deadline is normally Sunday 2 pm Central European Summer Time. Then I'm working on the edition, which you can read a few hours later.

This is especially true for your music projects. Currently, I am summarizing youtube videos in a playlist and also mention bandcamp releases. But you may use other platforms and I will not get it. So if you would like to see your music in the News of the Rack, send me a PM with the appropriate URL.

I am also happy about suggestions, criticisms and opinions and what else comes to your mind.

And now to the news.

Developer News and other News

As previously announced, **Andrew Belt** will be in the **San Francisco** Bay Area from July 2nd to 14th.

- **Wed July 3 · 5:30pm** · Stanford Center for Computer Research in Music and Acoustics (CCRMA) · Knoll 217 classroom · Focusing on virtual modular DSP, C++, and how Rack works.

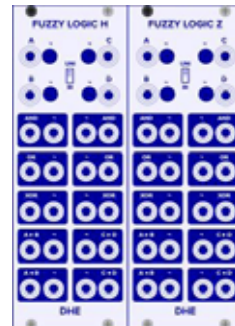

- **Tue July 9 · 7:30pm** · Hacker Dojo · Santa Clara, CA

- **Wed July 10 · 6:30pm** · Robotspeak · San Francisco, CA

Focusing on using VCV Rack with hardware, upcoming Eurorack ports.

- **Thu July 11 · 6:30pm** · Hardware Developers Didactic Galactic! · Supplyframe / Hackaday SF office · Live performance by Anti.negative

In addition, **Vult** has announced the first of its **mystery modules**. **Quincunx** will be released as soon as the second Mystery Module is finished, which is already being worked on.

Since version **1.0.4**, the two **DHE** Logic modules **Fuzzy Logic H** and **Fuzzy Logic Z** work either unipolar or bipolar.

One of the most sought after modules in VCV Rack are without a doubt the **Aepelzens** modules. Since the original developer won't develop them further, **ablaut** and **Pyer** have taken the matter seriously and now released the first beta version of the **repelzen** modules. Further modules are to follow and after an intensive test series, the modules will also be available via the Plugin Manager. Under the link you can download the beta version already.

In version **1.0.2**, **Vults** Random Generator **Caudal** has received two additional modes, **Planets** and **Fish Tank**. The new functions are in the Premium as well as the Free version and can be selected via the context menu.

The **Cloud Generator** from **E-Series** is now also polyphonic playable.

New Modules

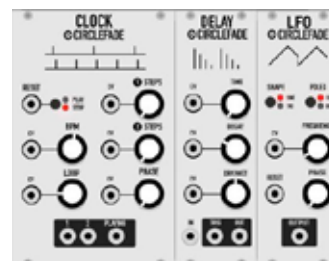

Also this week there is an increase in the Plugin Manager.

SLM released **Mux Freak**, a 4:1 clockable muxer with random function, probability and length control.

Entrian releases with version **1.1.0** the module **Follower**, a pitch and envelope follower.

Circlefade is now also available in V1 and has 3 new modules, **LFO**, **Clock** and **Delay**.

The modules of **Erica Synths** have been reworked with version **1.0.2** and supplemented by the module **Pico Drums**, a drum sampler module.

With version **1.0.3 Vult** releases the equalizer **Decline**.

Shaker by **Frank Buss** brings movement to the rack. With a control voltage at the inputs, the cable tension, the transparency, the size, as well as the x and y position can be dynamically controlled.

Nysthi has made many changes with the release of its V1 modules. By adding polyphony, some modules have become completely new modules. **POLYRECORDER** is a 16 channel recorder, **POLY SEVEN SEAS** is a 16 voice version of Seven Seas, **POLY Attack-Decay** and **POLY DelayAttackHoldDecay**, are polyphonic versions of the well known modules, **POLY ADSR** is a polyphonic envelope generator, **MICROTONAL HOST HELPER** allows to host microtonal tunings too and **POLY LPG** is a polyphonic version of the Buchla 208 Dual Dual LPG.

Many miss in Rack V1 the possibility to define **favorites**. **MyLittleTools** therefore publishes the **MyLittleFavorites** module, which makes this possible again.

Noobhour Modules publishes **Normaliser**, an attenuator that scales values to be within a defined range.

Also this week, **Klirrfactory** releases new modules included in the Gold, Platinum, Titanium and Hall of Fame packages. The **Overdub**

plug-in allows unlimited multitrack recording and consists of the module of the same name, the **Control** module, the multi send module **Muse** and the sum module **Sum**. The whole thing can be visualized with the well-known **Meter Bridge**.

The **RJ Modules** will probably be available soon in the Plugin Manager. If you can compile yourself, you can already look forward to old acquaintances and four new modules. **Acid** emulates a TB 303, **Esseff** is a Soundfont Player, **Pluck** is an ADSR / VCA and **µQuant** is a Quantizer.

The modules from **stoermelder** have secured their place in the rack within a very short time. Even with the latest creation it probably will not be different, because **Strip** allows to load groups of modules at the same time, save, etc.

Challenges & Collaborations

Very Cool Patch Challenge

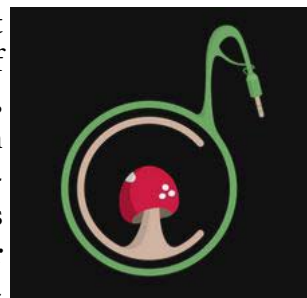

Edition 34 uses the module **SurgeVOC** from **Surge for Rack**. Entries can be submitted until **8th July** and a new challenge will start the following day. The contributions are summarized as always in a playlist.

Klirrfactory Hall of Fame Giveaway Challenge

Omri Cohen's Friday live stream this time went around the module **Garbage in Groove out** by **Klirrfactory**. For this occasion Klirrfactory provides

a **Hall of Fame Edition**, that is a complete collection of all modules of Klirrfactory, also the future ones. To win this package you have to **create a patch**, which contains the **free Clock Multiplier** of **Klirrfactory** as main element. A video of the patch must then be uploaded to YouTube and the link sent to the email: hofgiveaway@gmail.com. Time is until **July 8th** and after that a jury will vote on the most creative, unique and interesting patch (it doesn't have to be a song or a track, sound design ideas are also welcome). As always, only one contribution per person is allowed. https://www.youtube.com/watch?v=_Rmo4iVQrE4
