key events • new modules • developer news • module videos • contests • and more

#7 - Week 32/2019

### **Hello everyone in Rack Land,**

As indicated in the last issue, the first midi file players for Rack V1 are now available. Where the STS version in the Plugin Manager does not yet contain this, but the new version can already be compiled. Although Wrong People is not yet in Plugin Manager, versions for all operating systems can be downloaded from the developer's github page. For me, that's a big deal, because I can now use the iPad to create Midi Files and edit them in VCV Rack. In principle, this would probably be possible by means of the Midi modules of VCV Rack in cooperation with a DAW, but that did not really work for me, but probably that has something to do with my DAWs used. But that's all a thing of the past, because the midi file players are very uncomplicated to use and work very well. Although I have to admit that I have not tested it intensively yet. With that, the versatility of VCV Rack is growing again and there is no end in sight ...

And now to the news.

## Developer News and other News

**støermelder** has released version **1.1.0** and thus Midi-Cat is officially downloadable via the Plugin Manager.

**Bidoo** revises its modules liMonADe and OUAIVE with version **1.0.5**.

In version **1.2.0**, **Vult** replaces the Sub oscillator in Trummor2 with a regular 2nd oscillator, and the new modes of Caudal are now selectable directly in the module, not just the context menu.

## New Modules

And this week we are happy again about a new product developer.

The modules of **Wrong People** will probably be available soon in the Plugin Manager, but until then you can find them for all 3 operating systems, on the github side of the developer. The modules are the Lua Script Interpreter **Lua**, the Tourette syndrome Simulator **Tourette** and the Multitrack Midi File Player **MidiPlayer**.

Although **GoodShepherd** is not yet available in the Plugin Manager, the github page of the developer can be used to download the sourcecode for self-compilation. The plugin includes the Sequencer **Stable16** and **SEQ3st** and the Uncertain Switch **Hurdle**.

Also this week there is a new module from **Klirrfactory**. **OctaSampler** is an 8-track stereo sampler and optimized for use with WonkySEQ. That's why it's included in this commercial plugin, but also in the Titanium and Hall of Fame editions.

**Skrylar** continues to expand its plug-in **Skylights**, respectively its version of the Turing Machine with version **1.0.2** and the **Vactrolyzer**.

The new version **1.0.4** of **STS** is not yet in Plugin Manager, but this will not be long. It contains as a new module the Midi File Player **MidiPlayer**.

In version **1.1.2**, **dBiz** not only revised its modules, but also released 2 new modules. **ContornoMK2** is an advanced version of Contorno and **Span** a panning module.

**Frozen Wasteland** has released with version **1.7.0** the Pseudo Random Value Generator **Seeds of Change**.

With **TheXOR** another old acquaintance returns with new modules, whereby on the github side of the developer there is currently only a Windows version and of course the source code to compile itself. New are the formula module **ascii**, the countdown module **counter**, the de-multiplexer **dmplex**, the midi quantizer **midyQuant**, the trigonometric noise generator **nag nag nag** and a blank module named **empty**.

## Challenges & Collaborations

### Very Cool Patch Challenge

Edition 37 of the Very Cool Patch Challenge is something special once again. This time, a random patch will be created with the module **WhatTheRack** by **korfuri**. 3 modules may still be added. Entries can be submitted by **August 19** and will be compiled into a playlist. A new challenge starts the next day.

In **Edition 36** of the **Very Cool Patch Challenge**, the module to be used was **re-burst** from **repelzen**. The contributions are summarized as always in a playlist.

Anyone interested in playing "musical pals"?

Unfortunately, the first attempt of a **musical chain letter** was not very successful, it now looks as if the new version is well

received. The principle is simple: a person creates a voice from scratch and then sends the file to the other friend. The other friend creates a new voice and sends the file back etc etc, until you have a nice generative patch!

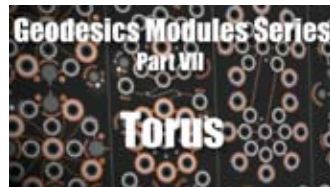

First results are already heard in the forum.

PATCH from scratch in  
VCV Rack v1*

## Music & Ideas

Youtube Playlist 32/2019:

If I have overlooked someone, I'm sorry. Then please let me know.

Current module versions of the developers (not all are in the plugin manager and some have to be compiled themselves.) Changes are highlighted in **red**, V1 versions **magenta**.
