NEWS of the RACK

key events • new modules • developer news • module videos • contests • and more

Hello everyone in Rackland,

I usually start on Sunday afternoons with the latest edition of the News of the Rack. Yesterday there were only a few new modules that I had already presented as beta versions, so I waited another day and actually this morning things looked completely different. The number of messages has multiplied overnight. There has already been a similar situation several times, so I am officially moving the publication date of the News of the Rack to Tuesday.

I have to highlight one of the messages separately. Thanks to JW-Modules, we now have a module in a VCV rack which is modeled on the legendary Fugue Machine from Alexandernaut, which unfortunately was only available as an IOS app until now. Although it was quite possible to use the Fugue machine to control VCV-Rack via Bluetooth Midi, NoteSeqFu is now available directly in VCV-Rack and this module is even more versatile. If you want to know more about it, you should definitely watch the videos from Eurikon, Omri Cohen and VCV Rack Ideas. Anyway, I'm excited because I never would have expected it. But now I am bold and hope that I will soon be able to report on the VCV rack version of Alexandernaut's other great module "Arpeggionome".

And now for the news

Developer News & other News

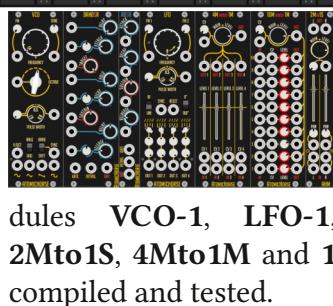

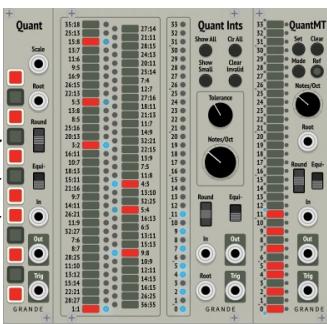

The developer **Robotic Bean** has so far contributed two commercial modules to VCV-Rack. Now the LP/HP Filter **Tilter** and the 808-Style Hand Clap **Clapper** are freely available through the library.

In version **1.1.11** **Mind-Meld** adds the placeholder "Stereo width: N/A" to the track menu of the **MixMaster** modules if the track is mono.

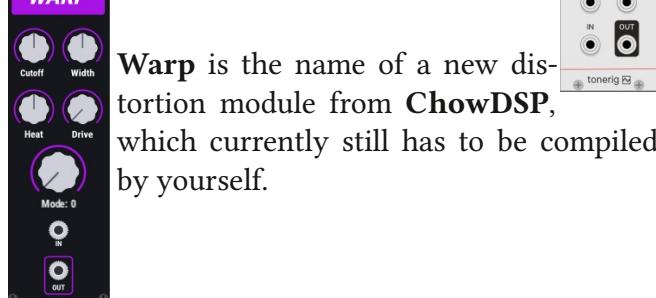

version **1.1.11**.

Grande's Quantizer Modules **Quant**, **QuantMT** and **QuantIntervals** received another update with version **1.3.0**.

"On heavy development stage" is written on the github site of the developer **AtomicHorse Modules**, but the modules **VCO-1**, **LFO-1**, **Envelope-1**, **ADSR**, **2Mto1S**, **4Mto1M** and **10Mto1M** can already be compiled and tested.

The **modal** oscillator from **tonerig**, which uses modal synthesis for sound generation, can also be compiled by yourself.

WARP is the name of a new distortion module from **ChowDSP**, which currently still has to be compiled by yourself.

In version **1.1.27** of **Bido**, the sequencer **zOù MAï** received a run input and the clock module **tOCAnTe** a reset and a run output.

Count Modula reminds us that Halloween is just around the corner. In addition to the other possible colors, there is now an orange design called "**Trick or Treat**". The **Rack Ears Blank** Modules also have various panel options. The version number **1.13.0** also suggests that it couldn't have been. In fact, all Count Modula sequencers now recognize a reset if it occurs no later than 100 microseconds after the clock signal.

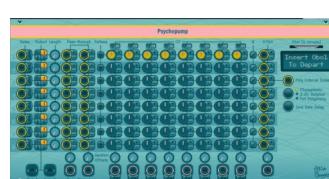

In version **1.7.3** of the **KautenjaDSP Potato-Chips**, some bugs have been fixed.

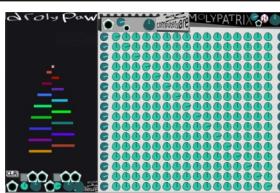

Beta-Versions (wip)

The **FehlerFabrik Suite** is about to be released, at least it says on the github page, where the binaries for all three operating systems can be downloaded, "probably the last pre-release". The suite was supplemented by the **Chi** module, a three-band crossover network. The design was also changed a bit in version **1.1.0**.

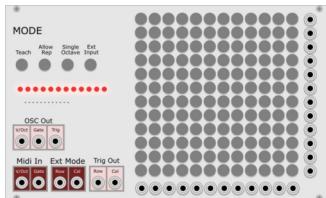

Creative modules and creative names are the hallmark of **Aria Salvatrice**. The **Psycho-pump** module is a new addition to the "Dangerous development builds". The name again leaves a lot of scope for the imagination, as a psychopomp is a companion that guides souls into the afterlife.

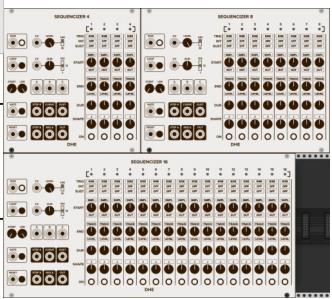

Computerscare version 1.4.0 is casting its shadow. The **Droly Paw** visualization module, the **Moly Patrix** mixer and the **Horse a Doodle Do** rhythm generator still have to be compiled.

I have already presented the majority of the new modules as beta versions.

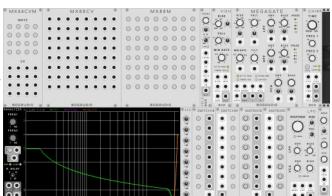

The **Sequencer Modules 4, 8 and 16** are the next generation of **DHE Modules** envelope generators.

Acorn Table by **Weldsplatter** focuses on 12-tone music.

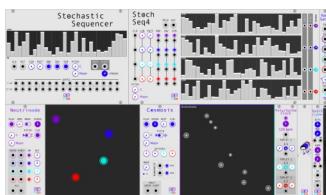

NonLinearCircuits has released further hardware clones with **4Seq**, **GENiE**, **Neuron**, **Statues** and **Numberwang**.

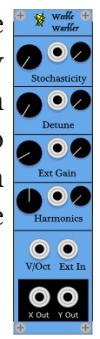

I have already presented **Bogaudio's** 15 new modules as beta versions. These are the mixers and mixer expanders **MX44CVM**, **MX88CV**, **MX88M**, **Matrix18**, **Matrix81**, **Switch18**, **Switch81**, the sequencer expander **ASX**, the analyzer **RANALYZER**, the VCA **VELO**, the envelope generator **VISH**, the low- and highpass gate **MEGAGATE**, the lowpass gates **LPG** and **LLPG** and the oscillator **CHIRP**.

Sha#Bang! Modules have now also arrived in the library. The plugin includes the modules **Cosmosis**, **Neutrino-de**, **StochSeq**, **StochSeq4**, **Polyrhythm Clock**, **Qubit Crusher** and **RandGates**.

ZetaCarinae has meanwhile arrived at the library. The latest module is already available for download as Mac and Win versions, but the official release is likely to be imminent. The **Weeble Warbler** is an oscillator, but as always with ZetaCarinae it is about Brownian motion.

New Modules

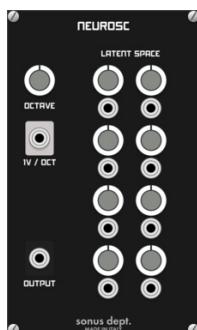

I have already presented **IOU** from **ZetaCarinae Modules**, an extended version from Ohrnstein-Uhlenbeck.

The polyphonic multitrack looper called **Looper** by **Lilac** appeared without warning.

az publishes its second module with the **LoFiTV** visualization module.

Neural networks

seem to be the latest trend in VCV Rack. **Sonus Dept.** has now released the wavetable oscillator **Neurosc**, which is also based on that principle.

NoteSeqFu is not a new Asian martial art, but a very special version of the well-known and popular **NoteSeq** from **JW-Modules**. The Fu stands for **Fugue Machine** and thus this great creative tool moves into VCV rack. The principle of a fugue is the staggered, polyphonic repetition of musical themes. The **Fugue Machine** from **Alexandernaut** uses four play heads, whose pitch, direction and speed can be defined. If we take a look at the NoteSeqFu, it has numerous CV inputs and other options that the model does not have. And like all modules from JW-Modules, this is also free of charge.
