NEWS of the RACK vcv

key events • new modules • developer news • module videos • contests • and more

Hello everyone in Rackland,

Some time ago I introduced the "Beta versions" section to distinguish the officially available modules from those that are not (yet) available in the library and for the most part still have to be compiled. I also use the same terms here, e.g. "available" and "published", which of course refers to the beta status of the modules. I assumed that it is clear to everyone that in most cases the modules presented under this heading are not yet fully developed, ie "work in progress" or "wip". To make this clear, the section is now called "Beta versions (wip)". At the same time, I ask all developers who do not want their working versions to be announced by me to contact me. I will not do anything that you do not want, promised!

And now for the news

Developer News & other News

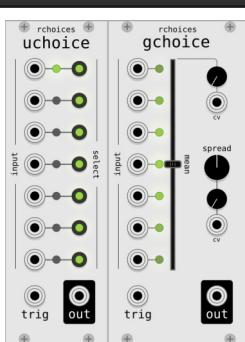

With version 1.2.2, **NoraCodes** has further optimized the two modules **Fives Astable** and **Fives Astable C**. Now you can switch between unipolar and bipolar.

The **MindMeldModular** modules have also been optimized and given additional options.

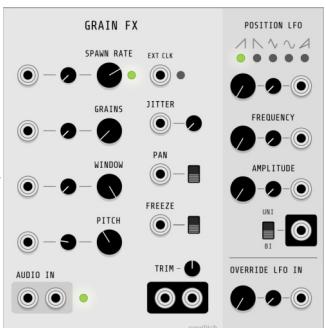

The **Qwelk** modules are now officially available for Rack V1

in the library.

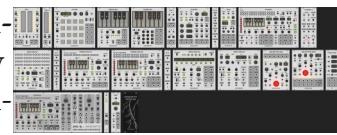

The developer **rchoices** works on the random choice modules **uchoice** and **gchoice**, which trigger a random input signal. The plugin must be compiled yourself.

Voxglitch has made version 1.13.0 available for compiling on its github page. This includes the new **Grain FX** module, which I have already presented here as a Grain Blender.

I introduced **Count Modula's Lunetta** modules last week in beta versions, this week they were officially released in the library.

Update 1.1.6 from **Impromptu** is now available from the library.

Version 1.1.1 of **ML Modules** is now also available via the library. **Cloner** and **PolyArp** have been revised, whereby Cloner crashes under Linux my Rack.

There is also a new version of **kocmoc** this week. In version 1.3.2 the filters **LADR** and **SVF** have received Attenuverter.

I have already introduced the developer **StudioSixPlusOne** at this point. KS Delay is now called **Wallenda**, the Comb Filter **Massarti**, the Shift Register **Tyrant** and the Mixer **Eva** are new. There are no binaries available for the new version, but you can already compile it yourself.

New Modules

I have also already introduced the modules of version 1.10.0 from **Count Modula**, but only the **Event Timer** and the **Super Arpeggiator** have been released. I hope that the **Palette** module will follow in the next version, because I find it very helpful and will therefore not update for the time being.

There is always a lot of movement on **stoermelders** github side, changes occur almost daily. I have therefore already presented the officially available modules **AFFIX**, **μAFFIX**, **GLUE**, **GOTO**, **GRIP**, **MIRROR** and **POLY-PILE** as beta versions.

Frozen Wasteland published another **expander** for **Portland Weather** with the **Grid Control Expander**, with which it is possible to modulate all 16 taps at the same time.

I also presented the **Submarine TD-510** text module as a beta version last week. In addition, since version **1.1.5**, the **arithmetic operators** and **cross-faders** have polyphonic input signals summed.

Challenges & Collaborations

Very Cool Patch Challenge

Edition 53 of the **Very Cool Patch Challenge** is all about **Caribbean rhythms**. Participants should be inspired by reggae, samba, rumba, merengue etc. and create a corresponding patch. This time the deadline is May 18th and as always the contributions will be summarized in a playlist.

Edition 52 was part 2 of a 2-part challenge and the continuation of Edition 51. The task was to create new patches with one of the fixed racks from the past month. **The challenge is still running.**

Drone Day 2020 collab

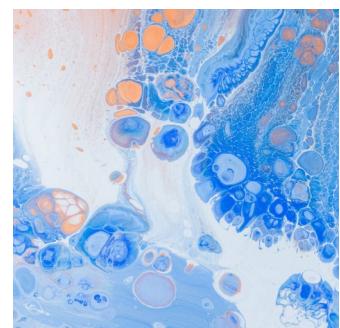

The **Drone Day** takes place again this year and **Ben de Groot** alias **ablaut** calls for participation in a joint contribution. This year is Drone Day on May 30th, so Deadline is **May 24th**. The topic is "**Breath**" and Ben uses the **Iwato scale in E**. (Tip: Mother from Orange Line has already implemented this scale). More information on this at <https://community.v-cvrack.com/t/call-for-submissions-drone-day-2020-collab/9614>
