key events • new modules • developer news • module videos • contests • and more

Hello everyone in Rackland,

I hope all of you are fine. Unfortunately, this is currently not a matter of course. And you don't even have to have Corona. Heat, asthma and masks are also a great combination. This creates stress and stress often leads to migraines and and and ...

It is also difficult for me to come to terms with the idea that I am no longer as efficient as before and that as a person who has always defined himself through his performance. But there is a reason why I was no longer able to pursue my profession at first and am now unable to work. And as my therapist says, not everything is psychosomatic. I'm not telling you this to feel sorry for me, but to explain why there was no News of the Rack again last week.

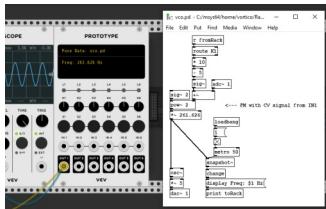

I know that I do it voluntarily and the world continues to turn when I don't publish a new edition, but I like doing it and I really enjoy browsing the web and sharing my discoveries with you. And it's even more fun when I discover unexpected things.

My highlight this week is once again from stoermelder. Pack Tau is the name of the new experimental plugin and it looks very unspectacular. But after I downloaded it and loaded the modules, I first thought, what have I done now, because suddenly the modules in the module browser were much larger. Did I hit any key and broke something? The solution to the puzzle is the simple MB module, an alternative module browser with zoom function. Thanks Ben, you are a real magician and have not only extremely sweetened my day, but also this issue of the News of the Rack.

Life is beautiful, let's enjoy it!

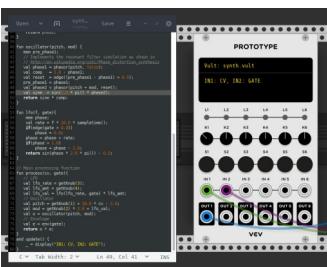

And now for the news

Developer News & other News

VCV's **Prototype** is now even more versatile. The **Pure Data** script has now been implemented after successful crowdfunding.

But not only that, the programming language **Vult** developed by **Leonardo Laguna Ruiz** (**Vult**), with which the VCV and hardware modules of the same name are also developed, is now available in Prototype.

Frozen Wasteland in version 1.15.4 eliminated a bug in the **Seriously Slow LFO**.

Version 1.0.10 of **Squinky Labs**

also fixed bugs in its two new oscillators, **Kitchen Sink** and **Substitute**.

Beta-Versions (wip)

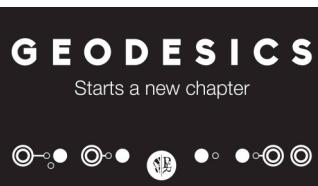

RobRichards Controllers are unofficial modules for various **Chase Bliss audio** pedals. The following interfaces are currently supported: **Thermae**, **Dark World**, **Warped Vinyl**, **M O O D**, **Generation Loss**, **Blooper** (Firmware v1.2) and **Preamp MKII**. The source code to compile yourself can be downloaded from the developer's github website. It also describes what other requirements must be met in addition to the corresponding hardware devices.

Gwelton's Gaussian Sample & Hold also currently has to be compiled itself.

Geodesics opens a new chapter. The actual plugin is no longer updated with new modules or new functions, but remains compatible with the latest VCV rack version. The Geodesics project will continue in a new form and with a new team. **Thanks to Marc and Pyer for these fantastic and unusual modules** and I am very excited to see what the future holds.

The **Atelier** oscillator Palette, inspired by **Mutable Instruments Plaits**, has been further optimized with version 1.0.2. The **correction** published in issue 29 of the News of the Rack does not cite **Xeniakos** but **Anlexmatos**, sorry! (hopefully that's right now)

The **Grande** modules are still beta and have to be compiled by yourself, but the plugin has been expanded to include additional microtonal modules. **QuantMT** is a tempered microtonal quantizer, **QuantMTIntervals** defines the quantization based on intervals and **NoteMT** generates corresponding microtonal notes.

The **FehlerFabrik Suite** is still only available as a beta version for now, but there are now binaries for all three operating systems. The **Rasoir** module, an asymmetrical voltage processor, has been added.

Delexander invites you to test the FM algorithm module **Algomorph**. For this alpha version, installation files for all three operating systems are also available on the developer's github page.

stoermelder also regularly provides automatically generated nightly builds for its **Pack One**. In the current version **+T** (expander for transit) and **X4** (mapping multiplier) have been added.

The third package from **stoermelder** is called **Pack Tau** and of course there are nightly builds for these "experi-

mental" modules. However, it is also pointed out that these modules may no longer work in future rack versions. **T7-Ctrl** and **T7-Midi** are utilities for patching cables, **T7-Assistant** helps to identify module and port IDs, **MX** is a utility module for controlling the mouse and ... **MB** is an optional module browser, which on the one hand provides the purely text-based browser from 0.6.x or with which it is (finally) also possible to **set and zoom the size of the modules in the preview of the regular module browser!!!** Hopefully this function will be preserved in one way or another.

New Modules

A new developer has appeared in the library again, without giving us beta versions beforehand.

chowDSP has numerous plugins, including in VST or AU format. Now the first modules are also available for VCV-Rack. **ChowTape** is an Analog Tape Emulation through Physical Modeling, **ChowPhaserFeedback** is a Feedback-Phaser, **ChowPhaserMod** is a Modulation Phaser and **ChowFDN** is a Feedback Delay Network Reverb.

The **Surge** Synthesizer plugin received a significant update with version **1.7.0** and the VCV rack plugin of the same name has been adapted to this and now contains the new functions, including the new waveforms and built-in filters in the sin oscillator. In addition, the VCV plugin now contains three new effects, **SurgeReverb2**, **SurgeFlanger** and **SurgeRingmod**.

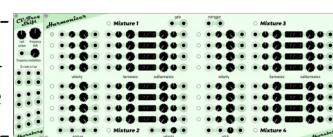

Rackwindows complements its plugin in version **1.1.1** with the polyphonic LP **Holt**.

Also new in the library are some modules that I have already presented as beta versions.

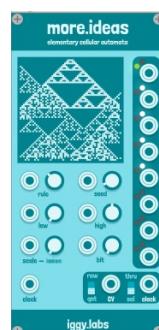

Above all, the module that we have all been waiting for. With the **Submarine Masterizer**, everything sounds even better, so. **Ftagn** from **southpole** has now got real competition.

A "good" or commercial sound had been guaranteed in the 80s due to a **Harmo-nizer**, which is why no production was missing that. **Ahornberg** has now officially released one for Rack and also the module **CV Frequency Shift**.

more-ideas from **iggy.labs** calls itself "Elementary cellular automata sequencer" and invites you to find out what that means.

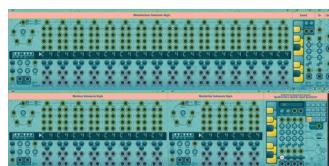

With the **SN76489** oscillator from **KautenjaDSP**, however, we know exactly what it is. An emulation of the Texas Instruments SN76489 chip from the Sega Master System.

Aria Salvatrice

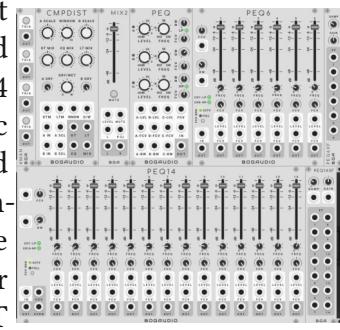

is known for unusual and creative naming and does not disappoint us with the latest modules. **Modulus Salomonis Regis**, **Modulellus Salomonis Regis**, **Modulissimus Salomonis Regis** are "self-modifying, self-patching sequencer" and according to the motto "pimp my duck" the **Quatarina** family was not lowered, but was prepared for future tuning.

Dintree-Virtual has only recently appeared in the library. The portfolio is now being expanded to include the **V103 Reverb Delay**, the **Four Channel Voltage Source V104 Four Vs**, the

Quad Control Voltage Processor V105 Quad CV Proc and the **Dual Slew Rate Limiter V107 Dual Slew**. if you miss the number V106, in the Euro-Rack world this is the D106 Step Sequencer. I do not currently know whether this will also be available for VCV-Rack, but maybe the developer will comment on it based on my report ...

Bogaudio has now officially released the modules of the last test builds. **PEQ**, **PEQ6** and **PEQ14** are 3, 6 and 14 channel para-metric EQs. **PEQ6XF** and **PEQ14XF** are expanders that provide one envelope follower for each band. **CMPDIST**

is a on a comparator distortion, **MIX2** is a stereo version of **MIX1** and **4MAN** is a version of **MANUAL** with four trigger buttons and outputs. In version **1.1.33** some bugs were fixed in the **PEQ**.

Challenges & Collaborations

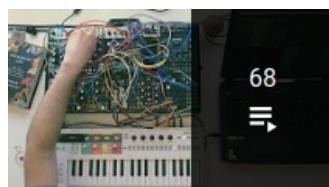

Very Cool Patch Challenge

After Edition 55 of the Very Cool Patch Challenge received extremely **little response**, there is currently no new challenge.

Initiator **Ben de Groot** (ablaut) holds out the prospect of a continuation after the summer vacation.

If I have overlooked someone, I'm sorry.
Then please let me know.

Current module versions of the developers
(not all are in the plugin manager and
some have to be self compiled.)
Changes are highlighted in red,
V1 versions magenta.
