MAKING SEAMLESS LOOPS FOR ANY SAMPLER

11 Mixing Techniques

Hello everyone in Rackland,

Welcome to another double edition of the News of the Rack. After moving again last week, I only went back online yesterday. The whole thing happened at very short notice, the rental contract was signed on Saturday and moved in on the first of the month, so I couldn't prepare anything and unfortunately the News of the Rack fell by the wayside again.

Yesterday I wanted to deliver this right away, but unfortunately my eyes let me down. I already noticed last week that I can hardly read anything with glasses at a short distance, but thought that was due to stress. Unfortunately it is getting worse from day to day and my monitor is now at 125% and I get a headache after a short time. Hopefully I just need new glasses. Fortunately, VCV is scalable and, thanks to stoermelders Pack Tau, so is the module browser.

If only everything were so easy ...

And now for the news

Developer News & other News

It is now possible to integrate VST3 plugins in the VCV rack. This is made possible by the paid plugin **Host** from VCV, which can now also work with the latest generation of VST plugins.

The commercial reverb module **Sound Stage** from VCV has been revised with version **1.0.1**.

The sampler modules **SIMPLICITER**, **COMPLEX SIMPLER**, **QUADSIMPLER** and **CONFUSING SIMPLER** from Nysthi all had the same bug, which has now been fixed with version **1.0.16**.

Valley has been updated to version **1.1.1**. In **Terrorform**, wavetable banks with up to 2048 samples can now be loaded. Wavetables made from **Serum** can also be processed. The integrated tables from **Terrorform** and **Dexter** are now available as external binary files, which means that the code is "leaner".

DHE Modules is working on an upgrade for its **Curve Sequencers**. The new modules, which will probably be called **Sequencizer**, receive numerous presets. The old **Curve Sequencers** will probably no longer be deprecated.

The **Meander** module from **PS-PurrSoftware** has been revised again with version **1.0.10**. Now staccato and legato should work correctly.

The **Nozori** modules from **Nozoid** have also been revised again and are now at version **1.1.9**.

In the commercial module **Entrian Acoustic Drums** you can now load your own wave samples since version **1.6.18**.

Hora Music has revised its commercial plugin **VCO_VCF_VCA** with version **1.0.6**. This fixed the polyphony problem on Mac and Linux.

After the **NoteSeq**, **JW-Modules** has now given its little brother **NoteSeq16** an end of cycle output in version **1.0.6**. In addition, some modules received new options and improvements.

The feedback of the **String Theory** module from Frozen Wasteland has an optional compressor since version **1.15.7**. In version **1.15.8** a random number bug was also fixed.

Beta-Versions (wip)

According to github, the **Agave** modules by **Fabian Esqueda** are already three years old and of course no longer up-to-date. Now **Jatin Chowdhury**, known for the **ChowDSP** modules, has prepared the code for the current VCV rack version and provides it to compile yourself to disposal. There is also a finished version for Windows. The plugin consists of the utility module **Agave Test Engine**, the filter **Agave Lowpass Filter Bank**, the Waveshaper **Agave FXLD**, the Noise Generator **Agave Metallic** and the filter **Agave VCF**.

I have already introduced **Lick Audio** at this point. On the developer's github page, the code for self-compiling is now also available for the waveshapers **Atan**, **Shape** and **Tanh**.

The Tape Stop module **fREIN** from **Bidoo** is also only available for compiling yourself.

The sequencer expander **ASX** from **Bogaudio**, which can expand the **ADDR-SEQ** by 8 steps each, is currently still available as a pre-release to compile yourself.

Nonlinear Circuits still provides nightly builds for all three operating systems on its github page. The sequencer **4Seq**, the reduced version of **Double Neurons** called **Neurons**, the triple version of Neurons called **Genie** and the Logic Module **Statues** are new. As usual, all modules are hardware clones of Eurorack modules.

I have already presented the **ZetaCarniae** modules **Brownian Bridge** and **Ornstein-Uhlenbeck** as beta versions. Now these are available in the library in the improved version 1.1.7.

I also presented the filter **Werner** from **ChowDSP** as a beta version. Version 1.3.0, just released in the library, also includes the Waveshaper **ChowPulse** and the Patch Credit Module **Credit**.

The **PotatoChips** from **KautenjaDSP** continue with chip sounds, but this time with the 6-voice 4-operator 16-bit audio generator **2612**. This is an emulation of the **Yamaha YM2612** from the **Sega Master System** and **Sega Genesis**.
