

# NEWS of the RACK vcv

**key events • new modules • developer news • module videos • contests • and more**

## #17 - Week 42/2019

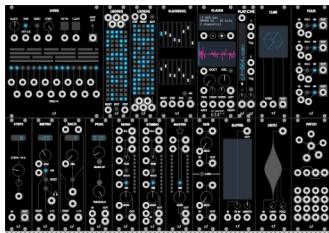

**Hello everyone in Rack Land,**

I just saw that I am at the unbelievable number of 1610 modules. How should one keep the overview and try out all modules? One can not do that alone, but luckily I'm not alone and I think everyone in our great community has an opinion on the modules and his favorite modules. And since this is always just a snapshot, I've come up with the idea of choosing a rack of the week every week. This will include the most popular modules in each division, hopefully helping newcomers to do more easily and allowing old hands to try something different. Such a selection is of course absolutely subjective, so I will not make this selection alone, but let you vote on it. The categories are based on the TAGs in the Browser module, which of course makes it extremely important that the modules are all well tagged. Each category has, in the spirit of the Olympic idea, a gold, a silver and a bronze medal. And these will be awarded virtually every week and I will also publish a patch with the winners of all divisions. And I'll also keep a record of which module has achieved which placements. Lots of statistics and tables, have I ever mentioned that I like that? For the vote and evaluation, I'm still working on an interactive PDF form.

In this start week, there will be an example of my current favorites and as soon as the form is ready, you can choose your favorite modules.

And now to the news

# Developer News & other News

cf has released a new update and is now at version **1.1.1**.

In version **1.1.1** of Impromptu Modular, the controller **Tact** was mainly revised.

**stoermelder**

**stoermelder** has further improved **PackOne** with version **1.2.0**, as well as the experimental plugin **PackGamma**.

Lindenberg Research has met my request for a stereo version for its upcoming filter **Neo** in an unusual way. Neo is now **polyphonic** and can be used **stereo** by

the newly added module **StereoPoly**. This module should also work for other mono modules. Both modules appear with version **1.2.0**.

A workshop on soundmaking will take place on **October 30** at ://about party in Berlin: **Learn modular synthesis without hardware. w/ Peter Kirn**.

Quote from the announcement: "Learn deep new ways of producing sound through modulation, with free and open source software **VCV Rack** (Mac/Windows/Linux). Beginners will find the basics to get going, but even more advanced synthesists may discover new ways of looking at sound design and new modules to discover. "

More information here [https://www.instagram.com/eclectique\\_berlin/](https://www.instagram.com/eclectique_berlin/)

## New Modules

Also this week we welcome some new module developers.

Although **kocmoc** is not yet available in the Plugin Manager, the State Variable Filter **SVF-1** can be downloaded from the github page of the developer and can be compiled by yourself.

**Little Utils** calls itself "a small collection of minimalist modules for the VCV Rack virtual modular synthesizer, with a focus on usefulness and simplicity instead of faithful analog emulation. The modules are **Button**, **Pulse Generator**, **Bias**/

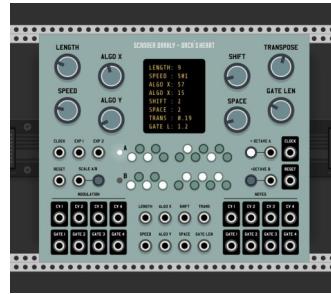

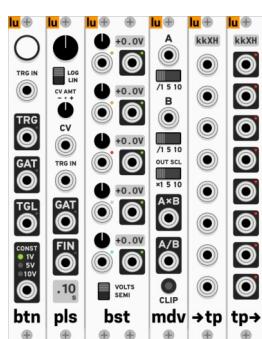

**Semitone**, **Multiply/Divide** and **Teleport In/Out**, the latter modules work much like Snake from Southpole.

**MindMeld Modular**

are Steve Baker and Marc (Impromptu Modular, Geodesics) Boulé and their modules will probably be available next week via the Plugin Manager. On the github page of the developers can be downloaded but already version for all 3 operating systems. The two modules actually belong together and thus **MixMaster** and **AuxSpander** form a 16-track stereo mixer with 4 sub-groups and 4 effect ways. But this description says as much as when you call a Ferrari a car. So be sure to check out the Record Factory video.

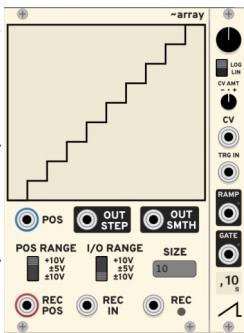

Although **ScannerDarkly** is not yet in the Plugin Manager, the module **Orca's Heart** has already hit like a bomb.

Some videos are already available and even Omri Cohen has presented this module at

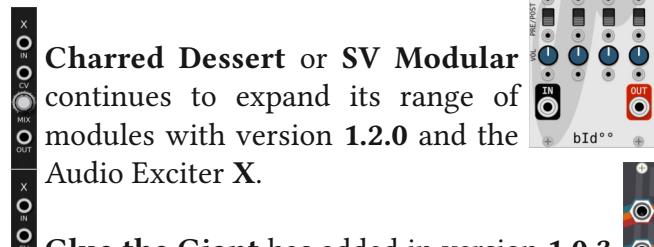

short notice in a live stream. Orca's Heart is a quad algorithmic polyrhythmic sequence generator, based on the alt firmware for monomes white whale module.

**PDArray** has also just arrived in Plugin Manager. The plugin provides modules for the creation of envelopes. **Array** is the base module that lets you draw, record, and play back envelopes. **Miniramp** generates a linear ramp or a sawtooth.

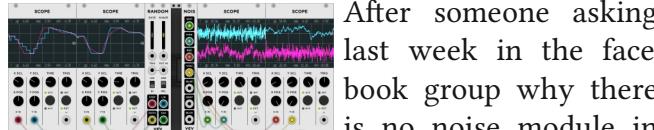

Under the name **OrangeLine** will be published the modules of Dieter "Quantum Trick" Stubler. The first module is also already available through the Plugin Manager, but is called beta version. **Fence** is a utility module for editing control voltage.

**Bidoo** has released version **1.0.11** and with it the module **bAFIs**, a multi-band distortion module.

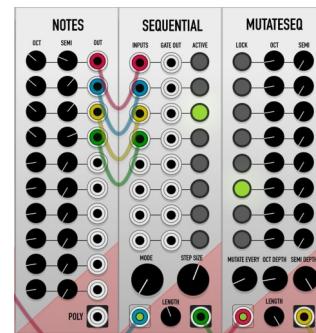

**Glue the Giant** has added in version **1.0.3** of its Modular Mixer Module range the Merge Module **Road**. Apart from the bright design, there is now also a **Night Theme** available. However, this must (still) be installed by hand,

After someone asking last week in the facebook group why there is no noise module in the **Fundamental** modules, VCV responded quickly and released the modules **Noise** and **Random** with version 1.3.1.

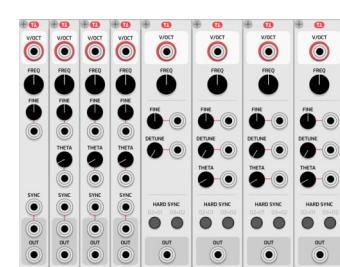

Also **Nysthi** has released two new modules with version **1.0.6**. **ETCHASKET-CHOSCOPE** is an XY oscilloscope and **SCALEOFFSET** is a polyphonic scaler / offsetter.

**RJModules** releases three new modules with version **1.2.1**. This time, the focus is on the topic sequencer. With **Notes** you can generate up to 10 different note values, **Sequential** is an 8:1 Sequential Switch with different modes and **Mutaseq** mutes random steps.

In version **1.0.5** **Vult** added the Sallen-Key Filter **Boomstick**. Both modules published in this version are important for the **Giveaway** (s.u.)

**Tiny Tricks** released 9 modules just a week ago and now has 8 new modules. This time it's all oscillators, namely **Simple Sine Oscillator** (TT-SINE), **Simple Sawtooth Oscillator** (TT-SAW), **Simple Square Oscillator** (TT-SQR), **Simple Triangle Oscillator** (TT-TRI), **Sine+ Oscillator** (TT-SINE+), **Sawtooth+ Oscillator** (TT-SAW+), **Square+ Oscillator** (TT-SQR+) and **Triangle+ Oscillator** (TT-TRI+).

# Challenges & Collaborations

## Very Cool Patch Challenge

Edition 42 of the **Very Cool Patch Challenge** takes this special number and thus the topic **question and answer** into focus. How this topic is interpreted is up to you. Entries can be submitted by **October 28th** and are then combined in a playlist. A new challenge starts the next day.

In **Edition 41** no delay or reverb module was allowed. The contributions are summarized in a playlist.

## The Day of the Dead Vult Giveaway

Also this year, **Vult** and **Omri Cohen** do a challenge due to the Day of the Dead. This time, a patch has to be created that does not use any other oscillator or filter except **Vultari** and **Boomstick**. Otherwise, all modules can be used. The video should be until **31.10.** uploaded to youtube and a link should be sent to [dotdvult19@gmail.com](mailto:dotdvult19@gmail.com). The winner will receive **all commercial Vult VCV rack modules**.

Current module versions of the developers  
 (not all are in the plugin manager and  
 some have to be self compiled.)  
 Changes are highlighted in red,  
 V1 versions magenta.
