

#32/2020

# NEWS of the RACK vcv

key events • new modules • developer news • module videos • contests • and more

The collage includes:

- A BOGAUDIO modular synthesizer rack with various oscillators and filters.
- A BOGAUDIO modular synthesizer patch featuring four oscillators labeled 1, 2, 3, and 4.
- A screenshot of the VCV Chords module showing a circular chord sequencer with options for VCO Chords, Plugin, Bassline, and Randomize.
- A screenshot of the VCO module showing various parameters like RATE, ATT, OFST, and CHAIN.
- A screenshot of the GRID SEQ module, a sequencer with a 4x4 grid of buttons.
- A screenshot of the SUPERCELL module, a complex multi-mode filter.
- A screenshot of the LFO - LLFO - BFO module, a low-frequency oscillator.
- A screenshot of the PERMUTATION module, a permutation sequencer.
- A screenshot of the FUGUE MACHINE in VCV RACK, a modular patch for generating musical patterns.
- A screenshot of the 35 Essential VCV Rack Modules Part 3 - Plateau, a guide to essential modules.
- A screenshot of the MODULAR SOUND DESIGN WITH VCV RACK #056, a video thumbnail.
- A screenshot of the THEY'RE BACK AND THEY BROUGHT FRIENDS WITH THEM module, featuring a portrait of a smiling man.

**Hello everyone in Rackland,**

<<Featured “modules of the month” on VCV social media use an arbitrary selection of new modules released in the last month that I believe will attract non-users or inactive users to use VCV Rack. This typically means that the most graphically- and functionally-polished modules will be featured, since I want to give an impression that VCV Rack has a polished environment of third-party modules.>>

This statement from Andrew Belt was posted on the official forum last week. It was his answer to the question of which requirements modules have to meet in order to qualify for this selection. If I look at the modules that managed to get in, I see some that, in my opinion, at least do not meet the graphical requirements and I miss others that I would definitely call successful.

But of course something like this is always subjective, that's why I'm not making any pre-selection and here are all the modules that I can discover. Including some modules in the development stage, because many developers look forward to feedback in this phase. But there are also developers who want to present a finished module first and who may only work with a few testers beforehand. These include Lindenberg Research and Squinky Labs and of course I respect that. But you will also find developers in the beta versions who have not yet officially appeared. If you don't want developments to be reported, please let me know, then I'll keep it to myself.

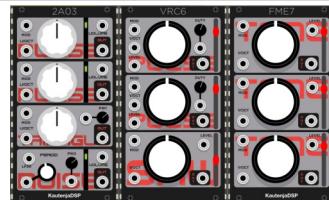

And now for the news

# Developer News & other News

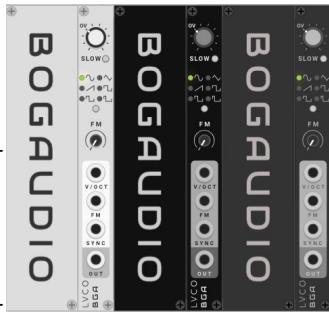

VCV has released version **1.2.0** of its paid sequencer **Chords**. Now you can influence the direction of a sequence, which enables other chord progressions.

**Freak** is a multi-filter and contains all filter modules from **Vult**, now in version **1.11.0** also **Boomstick** and **Disjoint**. The module is part of the commercial plug-in **Vult Compacts**. As usual with Vult, the other plugins also received the new version number.

The design of the Chip-tune oscillators **2A03**, **VRC6** and **FME7** from the **KautenjaDSP Potato Chips** plug-in has been revised.

**Bogaudio** is working on a **dark mode** for its modules. If this is desired, there should also be a version with less contrast. Yes, please! If you want to test this in advance, you can download binaries for all 3 operating systems from the developer's github page.

## Beta-Versions (wip)

I probably overlooked **CAO Plugs** last week, but this week I can introduce this new developer with two modules. If you want to know more about the two modules **DualCVShift** and **AddAll**, you can find a description on the developer's github page. The source code can also be downloaded there, because you still have to compile the plugin yourself.

The same applies to **gweltou**, too, but two new modules have been added, **Wobble** and the **HookeOsc**.

**MEM**, a memory expander for Midi Cat, is new in stoermelders Nightly builds and therefore available for all three operating systems.

**Impromptu** version **1.1.9** also has to be compiled by yourself. Included is **Tact-G**, a version of Tact-1 with gate output and two offsets.

**JW-Modules** has already announced some updates for **NoteSeq** and **GridSeq**. The next release will also include **D1v1de** and **Pres1t** for the **Str1ke Tempo Management System**. If you want to get an impression of it now, you have to compile it yourself.

And version **1.5.1** of the **KautenjaDSP Potato Chips** still has to be made by yourself.

The latest emulations are **AY-3-8910** (General Instrument AY-3-8910), **GBS** (Nintendo GameBoy Sound System) and **POKEY** (Atari POKEY).

# New Modules

There are not many new modules this week, but the few are amazing. Omri has already put it very nicely "**by the power of grayscale!**" Long announced and now the time has come. Not only the modules **Algorithm**, **Binary** and **Binary<sup>2</sup>** already available for Rack 0.6 have been converted to V1,

three **Permutation** modules, sequencers based on the Turing Machine, in 6, 12 and 18 HP width, and **Variant**, an expander for **Permutation**. **SuperCell** is called "Expanded Version of Clouds by **Mutable Instruments**" and that says more than enough. All these modules are VCV-Rack variants of the hardware of the same name Euro-Rack modules from Grayscale and in VCV-Rack free of charge!

## Challenges & Collaborations

### Build your Oxidlab Entferner LE patch - Contest

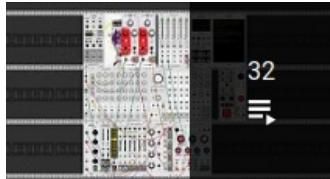

**Oxidlab** presents four lucky winners each a license for its commercial **Entferner** plugin. Three winners will be determined in a competition in which a patch with a specified module configuration must be

used. More details about the modalities can be found in the official VCV forum. The fourth winner will be drawn from all who comment on the relevant forum post. The closing date for entries is **August 11, 2020 at midnight**.

If I have overlooked someone, I'm sorry.  
Then please let me know.

Current module versions of the developers  
(not all are in the plugin manager and  
some have to be self compiled.)  
Changes are highlighted in red,  
V1 versions magenta.
