# NEWS of the RACK VCV

key events • new modules • developer news • module videos • contests • and more

# Hello everyone in Rackland,

I've been doing the News of the Rack for 2 years now and a lot has happened since then. In the beginning there was a

weekly news broadcast, followed by the newspaper version the next week. At the beginning of 2019 I switched the video to monthly, but for health reasons I had to stop the monthly publication (for the time being) with the September issue. Unfortunately, a sequel is not to be expected at the moment because my voice is too unstable. From the beginning, the News of the Rack was bilingual and nothing has changed to this day, the cycle has (usually) remained weekly, because a lot still happens in Rackland in a week.

For the 1 year birthday I said, I'm just the chronicler, the news is done by others and that's how I still see it. Of course, that also means that I have to get this news from somewhere. I find most of it by chance or purposefully while doing research, but I am sure that I will miss a lot. If you have something that you think fits into the News of the Rack, just send it to me via facebook or the forum. But even if you would like me not to report something that I might find, just let me know. You don't even have to go into detail. Omri e.g. tells me that something is coming and he would like to announce it himself. All right, of course that makes me curious, but I still keep my feet still. No problem.

And now for the news

# Developer News & other News

The **VCV-Rack** website has received another facelift. Here you will not only find various links and information on the VCV modules, as before, but also interviews, tutorials and rack updates in the future. News about Rack 2.0 soon?

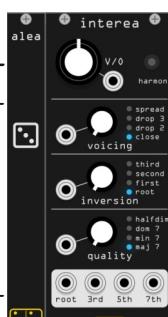

It's not official yet, but if you compile your modules yourself, you will discover a new design for the **ChowDSP** modules, which in my opinion is visually more appealing and clearer.

**Voxglitch** has revised the **SamplerX8** and the **Digital Sequencer** with version **1.19.0**.

**forsitan modular** is still in beta status and the modules **alea** and **interaea** have to be compiled by yourself. The design has been revised in the latest version.

**Valley's Terrorform** is a wavetable oscillator based on the **Dexter Operator** section, but much more extensive. Among other things, user wavetables can be loaded. It was announced some time ago. Now there is a trial version for those who can compile by themselves.

The **nozori** modules from **nozoid** probably caused problems on osX Catalina, which have now been fixed with version **1.1.7**. Unfortunately, the 47 modules still only work at a sampling rate of 48 or 96KHz, which prevents me from using these interesting modules.

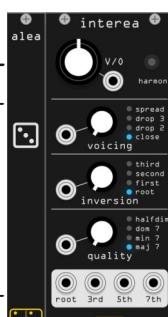

**Version 1.3.3** from **kocmoc** is now available in the VCV library. The filter modules **SVF**, **SKF** and **LADR** are now polyphonic.

## Beta-Versions (win)

**forsitan modular** is still in beta status and the modules **alea** and **interaea** have to be compiled by yourself. The design has been revised in the latest version.

In the latest nightly build of **stoermelder**'s **Pack One**, **Midi Cat** has been revised.

The experimental **Tau Pack** from **stoermelder** has also been revised using the Nightly Build. Here the changes affect the utility module **MB**.

# New Modules

 Squinky Labs has released a new oscillator, the **Basic VCO**. Although it is only 3 HP wide, it offers seven waveforms as well as full PWM and pitch control including attenuator. As always with Squinky Labs, the CPU consumption is very low and the aliasing is minimal.

The latest modules from **Studio Six + 1** are the two trigger sequencers **Iverson** and **IversonJr**, one with 16 and one with 8 steps. The specialty are the integrated interfaces to be able to control midi grid controllers with them or to be controlled by them.

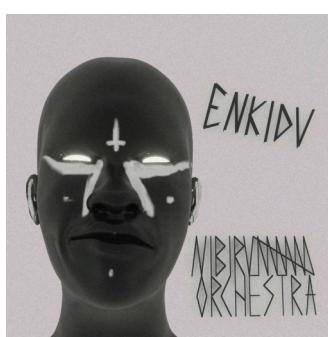

**Frequency Domain's Ball of Confusion** module may well cause some confusion. Fortunately, there is already a very good tutorial by Omri Cohen, because unfortunately, as with all modules from this developer, the GUI is the major weak point. And that's a shame, because the ability to load entire folders of wavetables and even to place **Serum** and **Massive** wavetables and then arrange them on a virtual sphere, which can then also rotate in 3D, is pure madness. Certainly a GUI is always a matter of taste, but there are a couple of very good examples in VCV-Rack, how very complex modules can be used intuitively with the right GUI and that would definitely do this module good. But hey, open source means that there might be someone who will do this.

If I have overlooked someone, I'm sorry.  
Then please let me know.

Current module versions of the developers  
(not all are in the plugin manager and  
some have to be self compiled.)  
Changes are highlighted in red,  
V1 versions magenta.
