#10 - Week 35/2019

DHE

Hallo Ihr alle in Rack-Land,

I've planned to work as much as possible only with open source software. The conversion has gone quite well so far, but for the DTP, I've always switched to Windows and Adobe, until now.

After Windows really upset me with the last update, I've been working intensively on Scribus this week and the result is in your hands. If you look closely, you will notice some differences. I could have done the same look as InDesign, but why should I? I do not use Adobe, so no Adobe fonts and Linux finally has its own fonts and also I think you should see changes.

Also with my videos you will see and hear this. My video published last week was heavy clipping and I have not heard that. In fact, that only came through youtube and I have to admit that I no longer look at my videos on youtube, but rely on them to match the uploaded version. Now I'm smarter and thank my audience, who made me aware of it. As a result, I became aware of a (for me) new video editing program, which I use now. With this I will now revise the already published video again and this time I will watch it on youtube ...

And now to the news

Developer News & other News

The paid VCV Host Modules for the integration of VST2 plugins in VCV-Rack have been revised. In version **1.0.4**, VST shell support for Waves Audio and Expert Sleepers plugins was added.

For all chroniclers and people who have always wanted to know how it all started, **Vult** has now released "The Vult prehistory".

bId°°

Bidoo has reworked its modules and is now at version **1.0.7**.

The **Blank Modules** by **Chiptuner** are now also available for Rack V1. In the Plugin Browser they appear under **TAG** (The great Assyrr).

DHE

Also the modules of **DHE** were revised. These are now at version **1.0.5**.

After a lot of problems with **korfuri's WhatTheRack** modules lately, they have been updated and work fine again.

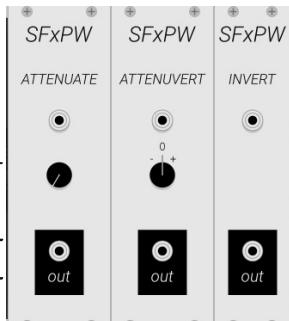

**What
The
Rack**

New Modules

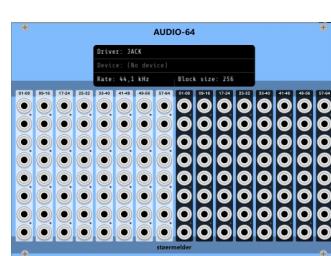

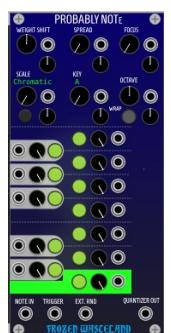

Caturo/Modulo has been in the Plugin Manager for some time, but its new modules are **Caturo Blanco**. They all have a CV input and 5 modes to animate them.

Last week the **Signal Flux** modules were not in the plugin manager yet, now they are and 3 more modules have been added. The functions of **Attenuate**, **Attenuvert** and **Invert** correspond to their names.

Thanks to Roli Seaboard, Linnstrument or K-Board, the **MPE** technology is finding more and more fans. VCV-Rack also supports these multi-dimensional controllers. **moDlzz** has released the modules **MidiPolyMPE** and **Midi8MPE**.

Frozen Wasteland likes to tease his upcoming modules. So again this time with the probability quantizer **Probably Not (e)**, based on an idea by Dieter "Quantum Trick" Stubler. If you do not want to wait for the release, you will find a beta version on the github page of the developer.

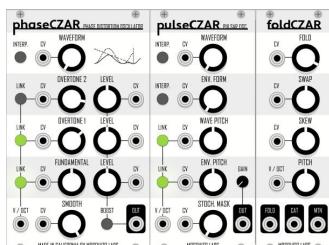

For those who think that having 16 audio inputs and outputs is not enough, **stoermelder** offers the **AUDIO-64** audio interface. A beta version can already be downloaded from the developer's github site.

Challenges & Collaborations

In Edition 38 of the Very Cool Patch Challenge, this time all 3 oscillators of Mosquito Labs will be used. Submissions can be submitted until September 3 and will be summarized in a playlist. A new challenge starts the next day.

In Edition 37, a random patch was created using **WhatTheRack** by Korfuri. The contributions are summarized in a playlist.

ANYONE INTERESTED IN PLAYING "MUSICAL PALS"?

Unfortunately, the first attempt of a **musical chain letter** was not very successful, it now looks as if the new version is well received. The principle is simple: a person creates a voice from scratch and then sends the file to the other friend. The other friend creates a new voice and sends the file back etc etc, until you have a nice generative patch! First results are already heard in the forum.

If I have overlooked someone, I'm sorry.
Then please let me know.

Current module versions of the developers
(not all are in the plugin manager and
some have to be self compiled.)
Changes are highlighted in red,
V1 versions magenta.
