#15 - Week 40/2019

Hello, everyone in Rack-Land,

it's still Monday, so the News of the Rack can still arrive on time. Normally I start on Sunday, but once again a severe cold has caught me and I have therefore prescribed myself a few days of bed rest. That's why the monthly issue isn't finished yet, and I sound like Dumbo himself at the moment. But it gets better and by the end of the week I should have made it.

I'm also currently over the next episode of "What does this knob do?" in which I present the oscillators I had planned to introduce in the 0.6.x update. It strikes me that many of the wishes I had in my summaries about the modules have already been fulfilled. And this is primarily due to the stoermelder modules. µMAP and ReMove alone are a dream for everyone who, like me, can never have enough CV inputs and would like to control everything via CV. And I don't think I can estimate the extent of the possibilities yet. It feels like this is just the tip of the iceberg. And I believe that in the modules of stoermelder there is still a whole universe of possibilities slumbering and they lead us into areas where no man has gone before.

and now to the news

Developer News & other News

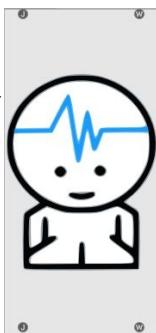

Alright Devices has reworked the free VCV-Rack versions of its commercial Euro-Rack modules and is now at version **1.0.2**.

JW-Modules has made improvements to its modules in version **1.0.9**.

Bidoo continues to maintain strong product maintenance and is now at

bId°° version **1.0.10**.

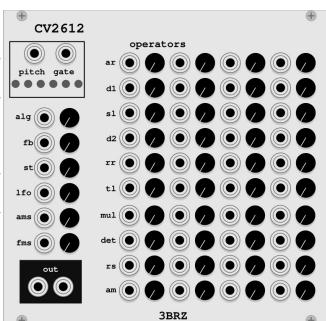

The module **Midi-Playerplus** from **STS** has the option for speed control since version **1.1.2**.

Chortling Hamster Modules has also made improvements to its modules and is now in version **1.1.1**.

Also this week we welcome a new product developer in the Plugin Manager.

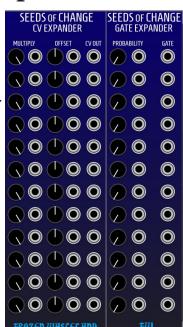

TercerBrazo released in version **1.0.0** the module **CV2612**, an emulation of the YM2612 chip of the Sega Genesis. The VCV rack version is free and soon a hardware variant for the Euro rack will be released.

Charred Dessert also released 2 new modules in version **1.1.0** last week, which I unfortunately missed. These are the Attenuator **Tine** and the Compressor **K**.

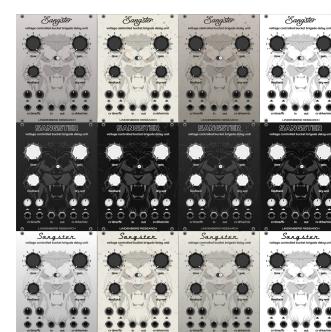

Frozen Wasteland continues to focus on the expanders for its modules with version **1.9.7**. This time, **Seeds of Change** gets a **CV Expander** and a **Gate Expander**.

Vult has not only made improvements to its modules with version **1.4.0**, but also released the oscillator **Vultari**. This emulates an Atari Punk Console (APC).

RJModules has released two new modules in version **1.1.0**. **Triggerswitch** is a trigger-activated gate switch, and **Dry/Wet** is a voltage-controlled fader for blending dry and wet signals.

Lindenberg Research releases with Version **1.1.0** **Sangster**, a CV controllable Bucket Brigade Delay. As usual from Lindenberg Research, it sounds great and there are many skins for it.

SV Modular released the fourth complete synthesizer version **1.2.0** of its commercial plugin **Synthetic** with **Alchemy**. Like its predecessors, it is semi-modular, so it can be integrated into a modular setup.

Challenges & Collaborations

Very Cool Patch Challenge

Edition 41 of the **Very Cool Patch Challenge** is once again something special. This time, the patch must **not contain a delay or reverb**. Submissions can be submitted by **October 14th** and will be summarized in a playlist. A new challenge starts the next day.

In **Edition 40**, the module to be used was **Rainbow** by **Prism/Amalgamated Harmonics**. The contribu-

tions are summarized in a playlist.

Musical Pals

The musical chain letter Musical Pals now has a **few rules** that simplify the cooperation.
