# NEWS of the RACK VC

key events • new modules • developer news • module videos • contests • and more

**Hello everyone in Rackland,**

last week brought us some VCV-Rack versions of existing Euro-Rack modules. "Try before buy" is no problem thanks to the VCV rack. And let's be honest, even those who are satisfied with virtual modules are happy about every hardware module that finds its way to a VCV rack. Of course, it is absolutely fantastic if these modules are also free of charge, because let's not kid ourselves, all of these modules as hardware can hardly be afforded. Nevertheless, it is important and a sign of appreciation for the original developers if one or the other then also buys the hardware. Because there are actually people who have to make a living from sales and if this is not possible, then it was with the free modules. The same also applies to the VCV rack modules, which are subject to a fee, although at these prices nobody can really make a living from it. Most plugins even get multiple modules and therefore have an unbeatable price / performance ratio. According to my count, there are currently 46 paid plugins, including those that cannot be purchased in the Plugin Manager. You probably won't get all of them, I am still missing 12 of them, which I simply do not need, but it does not matter. Every single virtual plug-in and every single hardware module that is bought says thank you to the developers.

And now for the news

# Developer News & other News

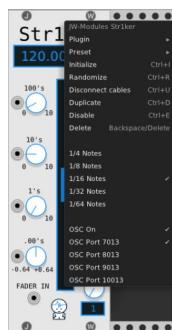

Version 1.8.0 of **RJModules**, with the new modules **Gluten Free** and **Megadivider**, is now available via the Plugin Manager.

The **Meander** module from **PS-Purrsoftware** has been revised again and has now reached version 1.0.5.

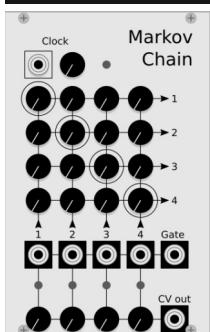

Version 1.0.11 of **JWModules** contains the bridge, which enables its **Str1ker** module to synchronize the BPM with Max for Live.

A bug was eliminated in the **PolyMerge** module of **23volts** with version 1.1.5.

## Beta-Versions

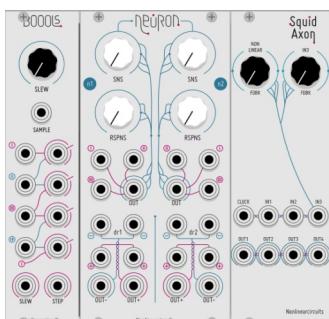

**flawr** publishes the first version of a Markov Chain-based sequencer **Markov Chain**, in which the probability with which one step influences the next can be set using a 4x4 matrix.

## New Modules

This week we are happy to announce two module developers who are publishing VCV versions of Euro-Rack modules.

I have already presented the modules of **Nonlinear Circuits** as beta versions. Now the three multifunctional modules **Double Neurons**, **Squid Axon** and **Bools** can be downloaded via the Plugin Manager. Fortunately, the design by Papernoise was adopted or modeled on it. Further modules are planned.

The appearance of **NANO Modules** in the Plugin Manager came as a surprise as there were no beta versions. The plugin consists of all currently available modules. These are the 4-way VCA **ALT**, the fil-

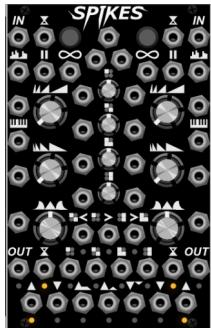

ter **FONT**, the mixer **MAR** and the envelope generator / LFO **QUART**.

**Voxglitch** has completely revised the break beat module **Auto-break** in version 1.3.0 and also added the module **Grain Machine**. As always with Voxglitch, this is again about granular synthesis.

The term "filter" in VCV-Rack is particularly associated with a name - **Vult**. And not just because of the many different modules, but also because of the quality. The newest member of the Vult Filter family is **Disjoint**, which is also called "DJ Style Filter. Behind it is a polyphonic stereo filter, which can be blended from lowpass to highpass with a button. The module is freely available.

"Floats is Dead. Long Live Spikes." With these pithy words **Friedrichs Audio** advertises its further development of its Make Noise Math Clone Floats. With this new edition, the image of the copy should finally be off the table, because spikes can do more - much more and without consuming more CPU. Fortunately, Spikes is fully backwards compatible with floats, so existing patches continue to work. As before, the module can be purchased through gumroad and Floats owners will receive the new module as an upgrade.

**Count Modula** seldom publishes just one module and so in version **1.8.0** there are ten new modules with which the count is now at 89 modules and thus continues to catch up to the undisputed leader Nysthi (130 modules). New are **Poly Chances** (polyphonic Bernoulli Gate), **Poly VC Switch** (polyphonic Voltage Controlled Switch), **Polyphonic Manual CV** (polyphonic CV Generator), **Poly VC Polarizer** (polyphonic voltage controlled Polarizer), **Poly Logic** (polyphonic Boolean Logic Module), **Signal Manifold** (Multiplier), **Poly G2T** (polyphonic Gate to Trigger Converter), **Attenuverter**, **8 Step Sequencer Expander** (individual gate outputs for the 8 Step Sequencer) and **Step Sequencer Expander** (individual gate outputs for the 16 Step Sequencer).

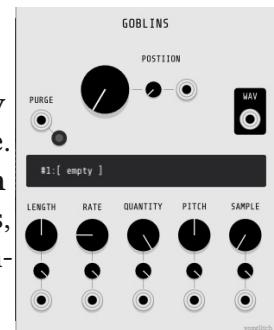

## Challenges & Collaborations

### Very Cool Patch Challenge

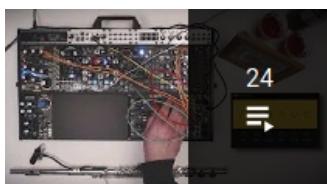

**Edition 50** of the **Very Cool Patch Challenge** is dedicated to the genre **Heavy Metal**. Otherwise there are no requirements. Contributions can be made until **24.2.** submitted and a new challenge begins the next day. As always, the contributions are summarized in a playlist.

In **Edition 49** of the **Very Cool Patch Challenge**, was to use the **Voxglitch Ghosts** module. As always, the contributions are summarized in a playlist.

If I have overlooked someone, I'm sorry.  
Then please let me know.

Current module versions of the developers  
(not all are in the plugin manager and  
some have to be self compiled.)  
Changes are highlighted in red,  
V1 versions magenta.
