# NEWS of the RACK

key events • new modules • developer news • module videos • contests • and more

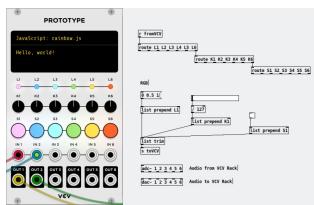

**Hello everyone in Rackland,**

who actually uses VCV-Rack? If you follow the posts in the forum and in the official facebook group, you could get the impression that only amateur musicians are at work here, which is not meant to be pejorative. We know that Serge Tcherepnin is among us and I personally think that's absolutely great and from the clues you can conclude that Pete Townshend is also a Racklander. But what about other famous musicians? Some composers at least use virtual instruments, that is well known, but does anyone use VCV rack? Certainly not for financial reasons, but VCV-Rack offers possibilities that go far beyond those of hardware modules. I think not only would I be thrilled to get an answer to this question.

And now for the news

# Developer News & other News

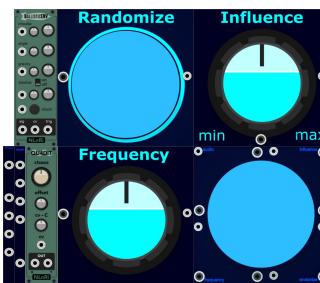

the **Prototype** module. It will soon be able to process Pure Data as well.

The paid **Creative Suite** from **Stellare Modular** has been revised with version **1.1.1**.

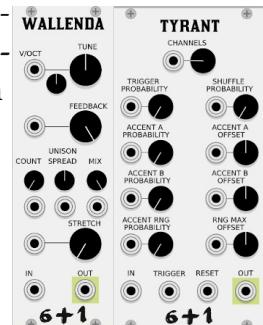

Another VCV **fundraiser** campaign ended successfully after only 9 hours. This time it was about another programming language for

The extraordinary modules from the developer **NonLinearInstruments** are now also available for Rack **V1** and can be downloaded from the library.

**StudioSixPlusOne** has improved its **Tyrant** and **Wallenda** modules in version **1.0.1**.

## Beta-Versions (wip)

NES goes VCV! **KautenjaDSP** is working on a NES rack **emulator**. I can not judge whether this is already functional, since I do not have any NES. The binaries currently have to be compiled by yourself.

I already presented **Metro-**  
**no****ne** from **Ahornberg** as a **beta** version last week, now the module is officially available in the library. **Tape Recorder** was added this week as a beta version. According to the developer, the module was inspired by **Teenage Engineering's OP-1**. The test module still has to be compiled.

**Count Modula** has already teased version **1.11.0** of its modules, but it still has to be compiled. New modules are the **Hyper Maniacal LFO** and an associated **Expander**, with which each waveform of the LFO can be tapped separately. Also new is a **1 HP blank module**, the color of which can be freely selected. The **Fade** module now has special options for recording.

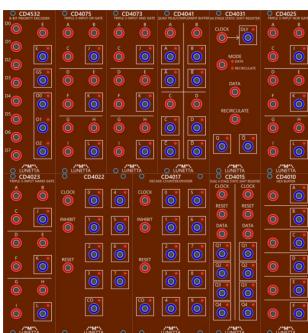

**Bogaudio** has also released new test builds on its github page. This includes two new modules. **MIX2** is a stereo version of **MIX1** and **4MAN** a quad version of **MANUAL**.

Version **1.5.0** of the modules from **Aria Salvatricce** is not yet officially available. In the development area of the github site, a **beta** version can already be downloaded for all 3 platforms. The Sequencer **Darius** thus receives numerous new features.

## New Modules

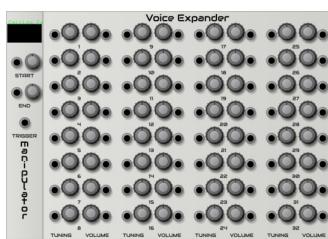

Last week were the new **Lunetta Modula Modules** CD4010 Hex Buffer, CD4015 Dual 4-Stage Static Shift Register, CD4017 Decade Counter/Divider, CD-4022 Octal Counter/Divider, CD4023 Triple 3 Input NAND Gate, CD4025 Triple 3 Input NOR Gate, CD4031 64 Stage Static Shift Register, CD4041 Quad True/Complement Buffer, CD4073 Triple 3 Input AND Gate, CD4075 Triple 3 Input OR Gate and CD4532 8-Bit Priority Encoder from **Count Modula** just beta versions, they are now officially available in the library.

**BassMaster** and **BassMasterJr** from **MindMeld** were still beta last week and have now arrived in the library. In addition, some improvements have been made in version **1.1.7**.

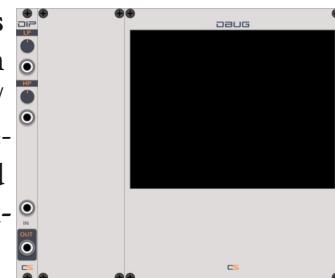

The **Caillou Granular Resynthesis Engine** of the paid Plugin **Synthetic** from **SV Modular** has now received a Manipulator Expander and a Voice Expander.

News from **NYSTHI**. **TZOP** is the big brother of the  $\mu$ OP and **TZEN** that of the  $\mu$ EN. Both modules are designed for FM algorithms ala DX7 and can be used both as a **master** and as an **expander**. Another new feature is the **Ambuance** reverb module based on the GigaVerb. Numerous other modules have been revised in versions **1.0.12** and **1.0.13**.

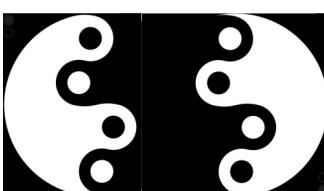

Welcome to the Dark Side! Those who prefer it darker are on the right track with **Omri Cohen's** new module **Lights Off** from the **Modular Fungi Collection**. The module is activated via a hotkey and the light can be dimmed in the context menu. By the way, with some stoermelder modules, this is also dynamic and can be built into the music. Have fun experimenting.

New from **Captain's Sounds** in version **1.0.5** are the parallel LP/HP filter **DIP**, the debug module **DBUG** and an **8 HP blank module**.

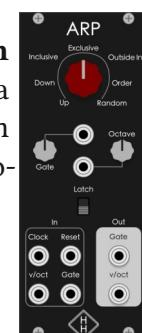

## Challenges & Collaborations

### Very Cool Patch Challenge

The theme of Edition 55 of the **Very Cool Patch Challenge** is "**Contrast**". It is up to you how the topic is interpreted. Deadline is **June 22nd**. The contributions are summarized in a playlist.

Edition 54 of the **Very Cool Patch Challenge** once again focused on a single module. This time, a patch should be created using the **Arp** module from **Hampton Harmonics**.
