NEWS of the RACK

key events • new modules • developer news • module videos • contests • and more

The collage features a variety of modular synthesizer patch panels, including "Organ Throo", "Squinky Basses", and "PERFECT LAZY SIDECHAIN". It also includes screenshots of the VCV Rack software interface showing complex patchwork and video thumbnails for several tutorials:

- VCV Rack Modules Part 4 - Multiples** (3:22)
- VCV Rack Crash Course Patch 2** (32:00)
- VCV Rack Crash Course Patch 1** (37:13)
- MIXMASTER JR QUICK START** (8:07)
- VCV Rack Crash Course 90-SECONDS QUICK START** (Patch 5) (16:27)
- GENERATIVE AMBIENT PATCH TEMPLATE AND TECHNIQUES** (12:29)
- What Should I Subscribe to in the VCV Rack Library???** (10:29)
- [TUTORIAL] MODULAR & PSYTRANCE THE FUNDAMENTALS (PART 1)** (10:50)
- Use the VCV Rack 0.6 Module Brower** (5:24)
- POWER COMBO!!** (8:51)

Hello everyone in Rackland,

today there is once again a double edition. Fortunately, this time the reason is not my health, but simply that there wasn't enough material to fill an issue last week. Maybe we should better coordinate in the future, then I'll postpone my sick days accordingly ;-)

In week 34 in 2018, the first edition of the News of the Rack appeared, back then as a video and a week later the first newspaper version. The insane number of 1000 modules at the time was the reason for me to publish this weekly summary, because even then I had the impression that I was losing the overview. 2 years later I have installed an incredible 2463 modules and there is no end in sight, so there is no end in sight for the News of the Rack. But if I'm honest, I still lost track. I have so many ideas and with each new module more are added that I am now paralyzed by the multitude of possibilities. While money makes budgeting for commercial products necessary, I still have to learn to deal with the almost unlimited possibilities of VCV-Rack. At the moment I am more concerned with the management of the modules than with their artistic use and that should not be the point.

Briefly on something else. Our community consists of musicians from all over the world, i.e. these also live in different time zones. Therefore, live streams that have not been recorded do not reach some people at all. It is also not helpful to be referred to the next live stream.

And now for the news

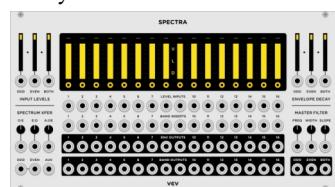

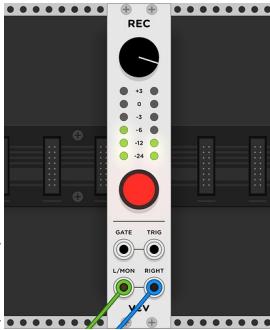

Developer News & other News

TWITCH.IV
Vortico - Twitch
Andrew Belt, VCV founder

Andrew Belt reported on the upcoming version **2.0** of VCV-Rack in a live stream. Unfortunately, I found out about it myself too late and there is no record, so I can't say more about it. If you don't want to miss a stream from Andrew, you should follow him on Twitch.

VCV Recorder version **1.1.0** has been released and adds the Opus audio format, the ability to set the bit rate for videos and H.264 / AAC encoding. In order to be able to use the latter option, the module has to be compiled yourself.

Another VCV module, the commercial 16-band spectral designer **Spectra**, has been revised in version **1.0.2**. According to the changelog, this fixed a rendering bug on some Macs.

Grayscale version **1.0.1** brings improvements for **Supercell**.

The newest developer is **Collide Modules**. There is not yet information about the **Pan**, **Shuf**, **Env** and **Follow** modules on the developer's github page, but they definitely look very interesting. Of course, the plugin still has to be compiled by yourself.

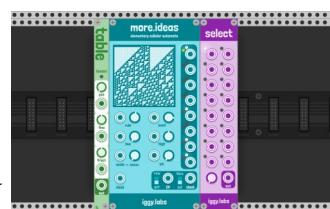

7 new version numbers in 20 days, that must be a new record. **KautenjaDSP** achieved this with its **PotatoChips**. Since version **1.6.0** the oscillators are polyphonic and bugs have been fixed. The current version has the number **1.6.3**.

The DSP chip emulator **FV-1.emu** from the developer of the same name now contains effect banks in version **1.0.3**.

Atelier's oscillator **Palette** has been further optimized with version **1.0.2**.

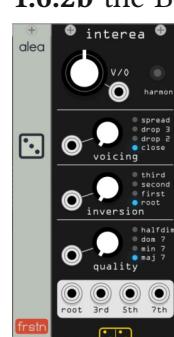

iggy.labs has fixed a bug in **table** with version **1.1.1**.

Frozen Wasteland fixed an offset bug in the **Seriously Slow LFO** in version **1.15.5** and added a Lo/Hi range switch to **Quantussey Cell**.

Beta-Versions (wip)

For a few months now, **Moaneschien** the alpha version of the **4Rack** plug-in can be compiled. With version **1.6.2b** the Bezier oscillator **Bezosc** has been revised.

I have also already presented **forsitan modular** at this point. You can now compile the beta version **1.1.1** yourself.

Rackwindows is already represented in the library, but the version there does not yet contain the **Monitoring** utility module. If you want this, you can find the binary files of the pre-release version **1.1.2-beta.4** on the developer's github page.

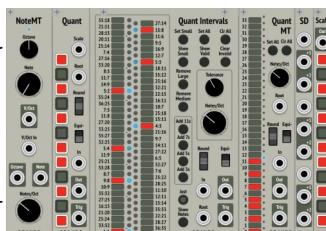

stoermelder is already an integral part of this category. Also this week there are new nightly builds. The latest module in the **PackTau** is called **PM**. This provides a context menu for occupied cable ports. In the **PackOne** this is the waveshaper **FACETS**.

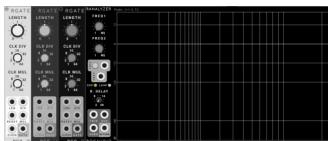

Here too, **stoermelder** makes the start, whereby I have already presented the new modules **MEM**, **SPIN**, **STROKE**, **TRANSIT** and its associated Expander **+T** and **X4** as beta versions. How these work can be seen very nicely in the videos that the developer posted in the official forum. Just follow the link. Numerous improvements have also been made. These are also explained in detail under the link mentioned.

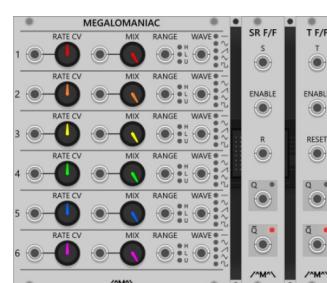

I also teased **Grande Modular** under the beta versions, a little too quickly as it turned out, because the developer has made a lot of changes and therefore asked me to wait until he give me his ok. That has now happened and in the meantime the modules have already arrived in the library. The plug-in now includes the Quantizer **Quant** with the associated **Scale** extension for your own scales. **QuantMT** is a 34-tone micro quantizer and this is also available in a more extensive version than **QuantIntervals**. Translating the notes into V/Oct is the task of the microtonal note generator **NoteMT**. Finally, **Sample Delays** provides 3 sample delays that can be chained, so that you effectively have 6 sample delays available.

The **Str1ke** **Tempo Management System** from **JW-Modules** was already represented in the beta versions. It consists of the three modules **Str1ker**, **D1v1de** and **Pres1t**. For understanding, I recommend the corresponding documentation (see link).

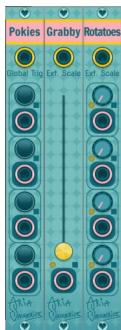

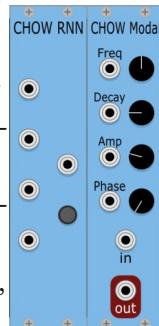

Long hoped for, it has finally been implemented, the **dark mode** for the modules from **Bogaudio**. As already announced, besides light and black, there is also a skin with less contrast, i.e. dark gray. The gate generator **RGATE** is new in version **1.1.34**. If you compile the current version yourself, you can already use the **RANALYZER**, a frequency response analyzer that is primarily aimed at developers.

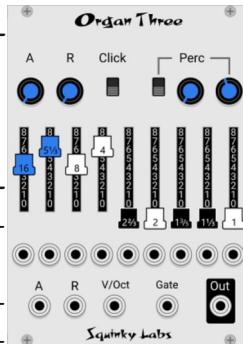

You can always count on **Count Modula** to forward an expander shortly after a module is published. This is also the case with the **Megalomaniac CV Expander** for the **Hyper Maniacal LFO**. The two flip flops **Single T** and **S/R** are also new. In addition, numerous modules have been revised.

I have to admit, I saw the **ChowRNN** module from **ChowDSP** some time ago, but I thought it was in the early stages of development because I missed the controls. I was wrong because this module is called "simple recurring neural network" and seems to be an effect. I have no idea what it does, but I'll try it out. **ChowModal**, which is a resonance effect and can therefore be used as a filter or oscillator, makes it easier.

Aria Salvatrice stands for extraordinary modules and that also applies to the three remote controllers **Pokies**, **Grabby** and **Rotatoes**. If you want to know what the modules do, visit Aria's website with manuals, videos and gay baroque technopop and pastoral industrial music.

In contrast, the new **Organ-Three** module from **Squinky Labs** can be identified at a glance for what it is, of course only if you know a **Hammond organ**. What? A Hammond organ? In VCV rack? So I can control a Hammond organ with control voltage? Madness! Sorry, but I just can't stay factual and I think about the really big ones on this instrument who have shaped me a lot, like Keith Emerson, Rick Wakeman and Jon Lord.

Okay, now I went for a walk to calm down, but that's not so easy with the **Opsyloscope** from the **Modular Fungi** collection by **Omri Cohen**. Wait, why is this under New Modules, it is available for a few weeks? Omri himself modestly calls the new version just an update, but it's so much more. The new option **pop-out window** makes it a completely new module in my opinion. Sure, the basic operation is the same, but when I have made my settings I detach the graphic from the control module and can then not only move it anywhere on the screen, I can even set the size freely and this beyond the line. Rack 0.6.x still had the option of scaling an oscilloscope horizontally and vertically, but only within the framework of the rack dimensions. Now we can scale freely and thus finally have the possibility to incorporate graphic elements and this in combination with the different display types and the CV control is simply such a big upgrade of VCV-Rack that this module still has so much to do with its predecessor like a Porsche 911 with a VW Beetle. Somehow they look similar, but when you drive you can tell the difference. So once again I cannot express my thanks to Omri and his team in words.

Challenges & Collaborations

Build your Oxidlab Entferner LE patch - Contest

The lucky winners are (according to the forum):

Spyartinc
denis.tercier
canosilveira.diego

The randomly drawn post is from:

Yeager

Congratulations!

If I have overlooked someone, I'm sorry.
Then please let me know.

Current module versions of the developers
(not all are in the plugin manager and
some have to be self compiled.)
Changes are highlighted in red,
V1 versions magenta.
