#13 - Week 38/2019

Hello, everyone in Rack-Land,

the topic of the week was clearly the VCV rack variant for iOS called miRack. Just the sense of being able to do everything in any place, even on the road, could be discussed for a long time and no common denominator could be found. That is not important, nobody is forced to do it. I also have an iPad because my former employer swore by Apple back then, but now he sees it differently, but that's just by the way. Even though I absolutely don't like the general handling of the iPad, I also have apps for making music and I have often wished to be able to integrate them into my DAW on the PC. With VCV-Rack this wish has even been strengthened, because some apps would certainly do extremely well with it. That's why I immediately became sensitive when the news of an adaptation for iOS made the rounds. But suddenly the disillusionment came when it became clear that VCV had nothing to do with it at all and that it was a matter of implementing version 0.6.x. Andrew always very clearly rejected a port to iOS or Android. It is therefore highly desirable for someone else to try it. The current discussion clearly shows that this is of course not easy from a legal point of view, especially if the porting is subject to a fee. Copyright is currently a hot potato, especially in the recycling of samples. But I also see some parallels with our discussion. The least in my opinion is to name the original inventor/developer/artist. In this respect, I also consider it rather positive if logos and designs are adopted unchanged, but this must not simply be done without consultation. Unless the author has made it clear from the outset that he does not care what happens to his intellectual product, he must agree to further use. Whether it's code or design. I guess that probably wouldn't have been a big deal either. Of course the quality has to be right, too, which is especially true for the ported Eurorack modules, because after all you have to lose a name. But it is difficult when a free product then becomes chargeable. At this point I understand every developer who goes to the barricades here. Even if the licensing side should not make such an action illegal, I do not believe that this is in order and will certainly not be supported by me until an amicable solution is found.

and now to the news

Developer News & other News

GoodShepherd has added another option to its **Stable16** sequencer in version **1.0.1**.

moDlz has made further improvements to its modules and is now at version **1.1.6**.

moDlz

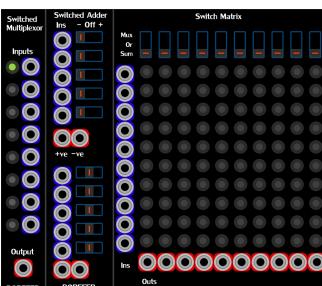

Valley Audio has announced **Terrorform**, a polyphonic wavetable oscillator based on the operators of **Dexter**.

New Modules

This week we welcome again new module developers.

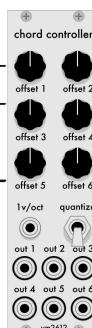

Dopefed has taken the modules of **strums/mental** and converted 3 of them with improvements to V1. These are **SwitchedAdder**, **SwitchedMux** and **SwitchMatrix**, which now all have multiple modes. The source code to compile can be downloaded from the github page of the developer.

Also, the modules of **Racket Science** are not yet available in the Plugin Manager, but can be compiled by yourself. A description of the modules **Vector Victor** and **Boogie Bay** is also missing.

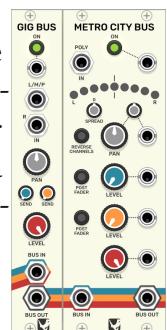

ym2612 is also not yet found in the Plugin Manager, but there is also a Mac version on the github page of the developer besides the source code. The **Chord Controller** module generates up to 6-note chords from a V / Oct signal.

Nysthi is back with version **1.0.4** with 5 new modules and numerous improvements. **SUSSUDIO**, **MUSICALBOX** and **MUSICALBOX2** are all Multi Sample Players with numerous options, **LFOMULTIPHASE2** is similar to the previous LFOMultiphase, but offers different phases and **GATETRIGMERGER** is a mege module for gate or trigger signals.

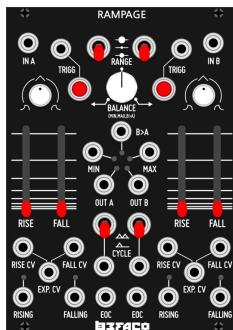

Glue the Giant has added two more mixer modules to its bus line in version 1.0.1. **Gig Bus** is a simple mixer strip and **Metro Bus** can distribute a polyphonic signal in the stereo spectrum.

SV Modular extends its commercial plugin **Synthetic** with **Paddington** PAD Synthesizer. Thus there is the Plugin Manager to acquire plugin from three different complete synthesizer voices.

Challenges & Collaborations

Edition 40 of the Very Cool Patch Challenge uses the module Rainbow by Prism/Amalgamated Harmonics. Submissions can be submitted until **September 30** and are then summarized in a playlist. A new challenge starts the next day.

In **edition 39** the module to be used was Rampage by befaco.

The contributions are summarized in a playlist.

Musical Pals

The musical chain letter **Musical Pals** now has a few rules that simplify the **cooperation**. <https://community.vcvrack.com/t/musical-pals-4-collab-project/5691>

VCV Rack Patch Files and Giveaway

Patch & Tweak have now also released **patches** after the blank modules. These were created by **Omri Cohen** and with the publication, there is a **giveaway**. More information can be found at <https://youtu.be/ENbOdKG6rNc>
