NEWS of the RACK

key events • new modules • developer news • module videos • contests • and more

The grid contains the following content:

- Top-left: A screenshot of a VCV Rack patch showing a complex modular setup.
- Top-center: A screenshot of a VCV Rack patch featuring a blue hexagonal module labeled "HIVE".
- Top-right: A screenshot of a VCV Rack patch featuring a tree-shaped module.
- Middle-left: A screenshot of a VCV Rack patch featuring a circular pattern of modules.
- Middle-center: A screenshot of a VCV Rack patch featuring a handprint graphic with the text "DAY OF THE DEAD" and "MYSTERY GIVEAWAY".
- Middle-right: A screenshot of a VCV Rack patch featuring a tree-shaped module with the text "DARK TECHNO FROM SCRATCH IN VCV RACK".
- Bottom-left: A screenshot of a VCV Rack patch featuring a dark background with the text "REDUCING CLICKS IN COMPLEX SIMPLER".
- Bottom-center: A screenshot of a VCV Rack patch featuring a complex modular setup with the text "L'effet de Synchro Le Patch Illustré".
- Bottom-right: A screenshot of a VCV Rack patch featuring a dark background with the text "ALL SOUNDS FROM ONE OSCILLATOR IN VCV RACK".

Hello everyone in Rackland,

how much material is required for an issue of the News of the Rack? In any case, significantly more than was available last week, which is why there is a double edition again today. And if I'm honest, it could be a little more this time too. Although I have just installed 2587 modules and actually don't need any more. I started with the News of the Rack in order to have an overview of new releases myself. In the meantime I have lost it and I have not yet come up with a solution with which I can change that. That frustrates me and it paralyzes my creativity. In the meantime, there are more and more days when I don't even sit down at my computer to make music. Do I have to limit myself to a few modules? So far I have vehemently rejected this idea, because VCV-Rack has developed far beyond its claim as a virtual Euro-Rack system. There are no financial and space restrictions, we have polyphony and unique modules that could hardly be implemented as hardware. So actually I should be overjoyed about it and I was too. But now I feel more and more like the sorcerer's apprentice who is slowly losing control. Is it just me or do you have similar experiences? Just write in the comments how you are and how you cope with the overwhelming possibilities. Maybe that will help me find a way for myself.

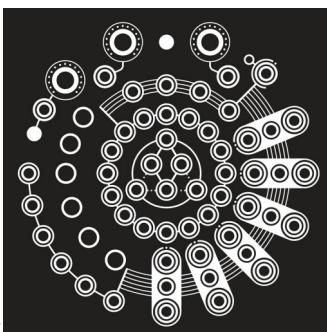

And now for the news

Developer News & other News

I got a huge shock when I read "disabled module Mb". Of course, this concerned the module previously included in the **Stoermelder-PackTau** plug-in, with which the size of the preview in the module browser could be changed. But don't panic! With version **1.8.0** it is officially part of the **PackOne** and is also a hidden feature from **PackTau** version **1.0.79f866a** (downloadable from the github page) in the work screen of VCV-Rack under the term "**Extras**".

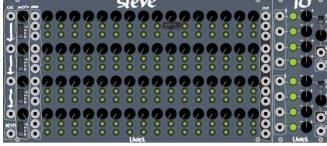

As already announced, we can look forward to a cooperation between **Geodesics** and **Vult**. Another teaser of the **Geodesics Vultiverse** has now been published as part of this year's Day of the Dead Giveaway. The picture shows the layout of the upcoming module.

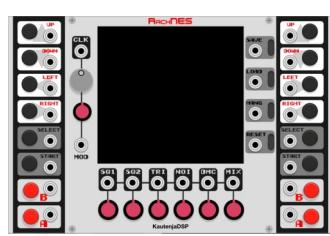

Frequency Domain also gives us a look at upcoming modules. Videos show how **Heat of the Moment** and **Dance this Mesh Around** work. The developers would like feedback from the community on this.

Beta-Versions (wip)

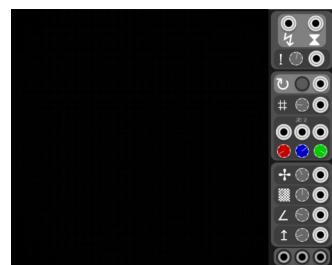

Uniek is still working on a plug-in that will simulate the way **Steevio** works. The **Steve** and **Io** modules still have to be compiled by yourself.

The NES emulator **RackNES** from **KautenjaDSP** also supports the **Lights Off** module from **Modular Fungi** from update **1.4.3**. This version still has to be compiled by yourself.

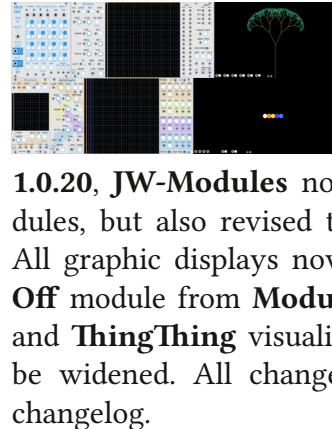

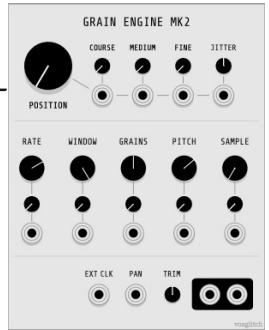

Update **1.1.11** from **MindMeld** has also arrived in the library. It is now possible to transfer the settings when switching between the 8 and 16-channel version of **MixMaster** and **AuxSpander**.

The **LoFiTV** visualization module from **az** now supports the **Lights Off** module from **Modular Fungi** since version **1.1.1**.

Version **1.20.0** of the **Grain Engine MK2** from **voxg-litch** can now also process bipolar pitch voltages.

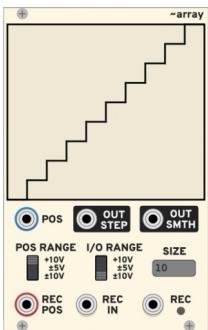

With version **1.0.17 - 1.0.20**, **JW-Modules** not only released new modules, but also revised these and older modules. All graphic displays now work with the **Lights Off** module from **Modular Fungi** and the **Tree** and **ThingThing** visualization modules can now be widened. All changes can be found in the changelog.

Lilac Loop simplifies the panel design of its **Looper** module with version **1.0.1**. However, this also still has to be compiled by yourself.

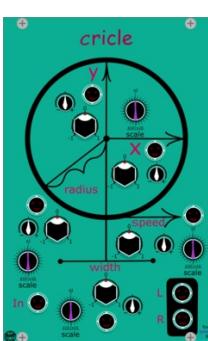

Grande Modular stays with the topic of microtonality. The Static Notes Generator **Microtonal Notes** has been announced for version **1.4.0** and currently has to be compiled by yourself.

In version 1.0.6, which has not yet been published, the **Array** module of **PdArray** receives a right-click option with which it is possible to set the content to zero. This version still has to be compiled by yourself.

The **Ivy Fun Pack** plug-in with the commercial **Cricle** module is completely new to the library. This simulates the effect of a signal that moves around the listener.

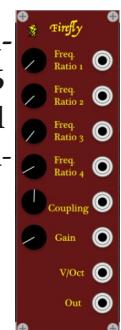

The newest module from **Squinky Labs** is the Compressor **Comp**. As expected from Squinky Labs, it requires very little CPU even under full load.

As already mentioned above, the **MB** module is now part of **PackOne** from stoermelder. Version 1.8.0 also includes the 4-channel sequencer **Hive**, the utility modules **Macro** and **Midi-Mon** and the distortion module **RAW**.

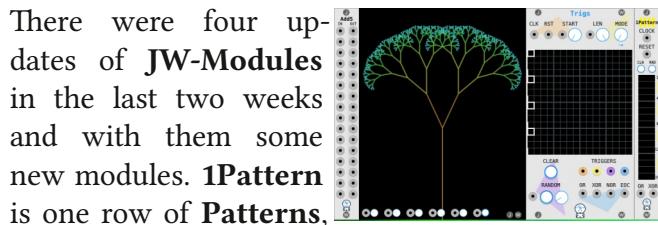

The **Firefly** oscillator based on the **Kuramoto model** comes in version 1.1.16 from **ZetaCarinae**. Binary files for all three operating systems can be downloaded from the developer's github page.

New Modules

There were four updates of **JW-Modules** in the last two weeks and with them some new modules. **1Pattern** is one row of **Patterns**, **Adds5** is a unipolar variant of **Caudal** (**Vult**), **Tree** a fractal visualization module and **Trigs** a trigger sequencer.

Sha#Bang! Modules is expanding its range with version 1.1.1, and now includes the LFO **Orbitones** and the visualization modules **Photron** and **Absorption Spectrum**.

Another successful fundraiser from **Audible Instruments** now brings us **Streams** from **Mutable Instruments** to VCV rack. Version 1.5.0 of the module is available as a polyphonic variant of the analog Euro-Rack module under the name **Dual Dynamics Gate**.

Challenges & Collaborations

Day of the Dead 2020 Giveaway

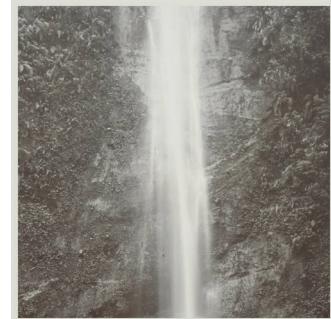

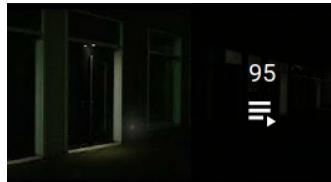

There were no fewer than 36 entries for this year's competition in which the mysterious new module from the **Geodesics Vultiverse** could be won. **Matthew Gayton** won with the big patch, **rifsc** with the

small patch. All contributions were summarized in a **playlist**. Many thanks to **Omri Cohen**, **Geodesics** and **Vult** for the competition, as well as all participants and of course congratulations to the winners.

New module
goes here!

Current module versions of the developers
(not all are in the plugin manager and
some have to be self compiled.)
Changes are highlighted in red,
V1 versions magenta.
